### **5.Operațiuni topo cadastrale efectuate:**

A) Metode și aparatură folosite : Punctele de contur ale imobilului au fost determinate folosindu-ne de aparatura GNSS din dotare(receptor Trimble R4, pe dubla frecventa), prin masuratori cinematice – corectiile diferențiale DGPS fiind receptionate prin modemul GSM de la reteaua virtuala de statii permanente ROMPOS – corectii furnizate gratuit de catre ANCPI. Transformarea coordonatelor din sistemul national Stereografic 1970 in sistemul ETRS 89 si reciproc s-a facut folosindu-ne de softul TRANSDAT pus la dispozitie de asemenea in mod gratuit de catre ANCPI si implementat oficial la nivel de toata tara.

În urma ridicării planimetrice efectuate în teren, folosind programe specifice pentru prelucrarea datelor, au rezultat calculul suprafețelor imobilului și planul de amplasament și delimitare a imobilului, toate acestea fiind anexate la prezenta lucrare, responsabilitatea întocmirii acestora revenind societății autorizate.

B) Sistem de coordonate : Sistem național de proiecție Stereografic 1970 – planimetric .
