STUDIU DE FUNDAMENTARE PRIVIND CIRCULAȚIA ȘI MOBILITATEA URBANĂ ȘI METROPOLITANĂ

PLANUL URBANISTIC GENERAL PLOIEȘTI 2015

FOAIE DE CAPĂT

Proiect nr.
16942/22.09.2014

Revizuire Plan Urbanistic General al Municipiului Ploiești,
Regulamentul Local de Urbanism aferent, Elaborare Strategie de
Dezvoltare Urbană a Municipiului Ploiești și Plan de Amenajare a
Teritoriului Metropolitan

Faza 1 – Studii de fundamentare

Studiu de fundamentare privind circulația și mobilitatea urbană și metropolitană

Proiectant de specialitate:

STUDIU DE FUNDAMENTARE TRAFIC

1. Introducere

1.1. Conceptul de abordare al studiului

Mobilitatea in mediul urban si peri-urban

Într-un înțeles general, în domeniul de studiu al orașului și a vecinătătilor sale, *mobilitatea definește capacitatea de deplasare a persoanelor, mărfurilor și activităților, fiind determinată și legată de spațiu*. Existența unei distanțe de parcurs, cât și a motivației fundamentale „*accesibilitatea activităților localizate*” determină în sens larg *mobilitatea spațială*.

O mobilitate urbană sustenabilă – care să permită oamenilor și bunurilor să circule liber, în siguranță, cu protejarea mediului înconjurător - reprezintă principalul obiectiv al comunității urbane care prin dezvoltarea politicilor de transport va crea cadrul necesar pentru asigurarea calității vieții și pentru dezvoltarea economică.

În condițiile societății actuale, "serviciul de transport" este rezultatul eforturilor depuse de specialistii care își aduc aportul la realizarea unei activități eficiente. În acest sens, rolul determinant în gestionarea mobilității urbane este conditionat de cooperarea factorilor implicați, care prin acțiunile lor, pot influența "politica de transport" la nivel local (oraș, județ) sau la nivele superioare (stat, regiune).

În cadrul dezvoltării urbane, politica de mobilitate a comunității este adesea influențată de acțiunile dezvoltatorilor, care investesc în activități economice și în egală măsură în infrastructura de transport. Investițiile în infrastructura de

transport urmaresc realizarea unui mediu rutier prietenos utilizatorilor si contribuie la armonizarea si eficientizarea serviciilor.

1.2. Documentatii utilizate pentru realizarea studiului

Studiul de fundamentare "Trafic" s-a realizat pe baza unei cercetari complexe asupra documentelor tehnice de specialitate care au abordat in timp problematica transporturilor urbane si periurbane. Documentatiile analizate au fost puse la dispozitie, in format electronic, de catre beneficiar. Separat, autorii studiului au consultat institutii care au activitati legate de transporturi: Politia Rutiera Ploiesti si S.N.C.F.R. – Directia Transport Calatori.

Datele culese din toate documentatiile avute la dispozitie au fost analizate cu scopul de a obtine o sinteza a prevederilor urbanistice anterioare. Mentionam in acest sens documentul "*Planul de Urbanism General Municipiul Ploiesti*", "*memoriu general*" elaborat de catre S.C. CONSPROIECT S.A. in anul 1999 si prelungit in anul 2009.

Avand in vedere importanta etapei de documentare, ca parte integrata de lucru in cadrul prezentului studiu de fundamentare, evidențiem mai jos documentele primite de la beneficiar utilizatrate in aceasta faza:

1. "*Plan de Urbanism General – Municipiul Ploiesti*" – *memoriu general elaborat de catre S.C. CONSPROIECT in anul 1999 – (actualizare 2009)*.
2. "*Master Plan de Transport Urban - Bucuresti, Ploiesti, Sibiu, Ploiesti*". "*Raport final Ploiesti*", – European Aid/1234579/D/SER/RO elaborat de asocierea: WSP, NEA, UNIVERSITAT KARLSRUHE (TH) in anul 2007.
3. "*Studiu de circulatie pentru municipiul Ploiesti*" – *Proiectarea si implementarea Bazei de Date Tehnice Stradale – elaborat de S.C. SEARCH Ltd. in anul 2004*.

4. "Studiu Pilot pentru Actualizarea Planului pe Amenajare a Teritoriului Judetean" – P.A.T.J. - pentru judetele traversate de culoarele de transport european si paneuropean – P.A.T.J. – Prahova. Vol 1 "Situatia existenta, probleme si prioritati. Vol 2 Propuneri, program de masuri, elaborate de Institutul National de Cercetare – Dezvoltare pentru Urbanism si Amenajarea Teritoriului – URBANPROIECT – Bucuresti, S.C. SEARCH Ltd, Institutul National al Monumentelor Istorice, R.B. Invest s.r.l. in anul 2002.
5. "Plan de amenajare a teritoriului intercomunal" PATICO – Zona metropolitana Ploiesti – Studiu de fundamentare, demografie si reteaua de localitati elaborate de Universitatea de Arhitectura si Urbanism "Ion Mincu" Bucuresti, Centrul de Cercetare, Proiectare si Expertiza si Consulting – in anul 2004.
6. "Planul de Dezvoltare Durabila a Judetului Prahova" 2007 – 2013.
7. . "Planul de Dezvoltare Durabila a Judetului Prahova" 2014–2020 – editat 2013.
8. "Planul de Dezvoltare Regionala Sud-Muntenia" 2014 – 2020, - draft 2013.
9. "Strategia de Dezvoltare a Municipiului Ploiesti" 2007 – 2025 – elaborat de Institute for Housing and Urban Development Studies CIHS – Romania s.r.l. – 2007.

10. "Planul Integrat de Dezvoltare a Polului de Crestere Ploiești – Prohova" – 2010.
11. "Plan local de acțiune ADVANCE – Municipiul Ploiești" elaborat de Intelligent Energy Europe – autor Anca Dragutescu / auditor ADVANCE – anul 2013.
12. "H.C.L. – Ploiești - nr. 103" – privind regulamentul pentru înființarea, organizarea și exploatarea parcarilor publice cu plată aflate pe domeniul public și privat al municipiului Ploiești- emisa în anul 2010.
13. "H.C..L – Ploiești - nr. 263" – privind regulamentul pentru înființarea, organizarea și exploatarea parcarilor publice cu plată aflate pe domeniul public și privat al municipiului Ploiești- emisa în anul 2012.
14. "Plan Operational Regional (P.O.R.) 2014 – 2020" – elaborat în august 2014.
15. "Studiu de cercetare pentru zona Nordica a Municipiului Ploiești – Sp. Județean – artera Gagăeni Valeni, Alba Iulia", elaborat de S.C. Mobil Proiect s.r.l. – anul 2008..
16. "Planuri de mobilitate urbana durabila pentru polii de crestere din Romania – Lot 2: Craiova, Iasi, Ploiești" – Raport interimar 1 - elaborat de asocierea P.T.V. Group, S.C. SEARCH Ltd, T.T.K. – februarie 2015.
17. "Buletinul Sigurantei Rutiere" – Raport anual 2013 – Inspectoratul General al Politiei Romane

2. Cadrul socio – economic pentru realizarea studiului

2.1. Amplasarea in teritoriu

Municipiul Ploiești reprezintă un centru urban de rang 1 amplasat aproximativ în sudul județului Prahova. În conformitate cu regulamentele prevazute în legea 151/1998, municipiul Ploiești reprezintă „centrul” polului de creștere Ploiești cuprins în Regiunea 3 Sud – Muntenia.

În cadrul Planului Integral de Dezvoltare (2007), polul de creștere Ploiești este definit de o suprafață administrativă de 61165 ha și o populație de circa 350500 locuitori (fig. 1)

Fig 1
Regiunile de Dezvoltare ale României conform Legii 151/1998
[sursa: Planul Integrat de Dezvoltare al Polului de Creștere Ploiești-Prahova].

Municipiul Ploiești ocupa o suprafață de circa 58 km² și are o populație de circa 230000 locuitori.

Din punct de vedere al amplasării în teritoriu, municipiul Ploiești se găseste pe axa de transport nord – sud: Brașov – București – Giurgiu la circa 60km distanță față de București, 110 km distanță față de Municipiul Brașov. Pe direcția est – vest orașele învecinate mai importante sunt municipiul Buzău în

est la o distanta de circa 70 km, si municipiul Targoviste in vest, la o distanta de circa 50 km.

Amplasarea Municipiului Ploiești în raport cu principalele trasee de comunicatie este prezentata in figura 2.

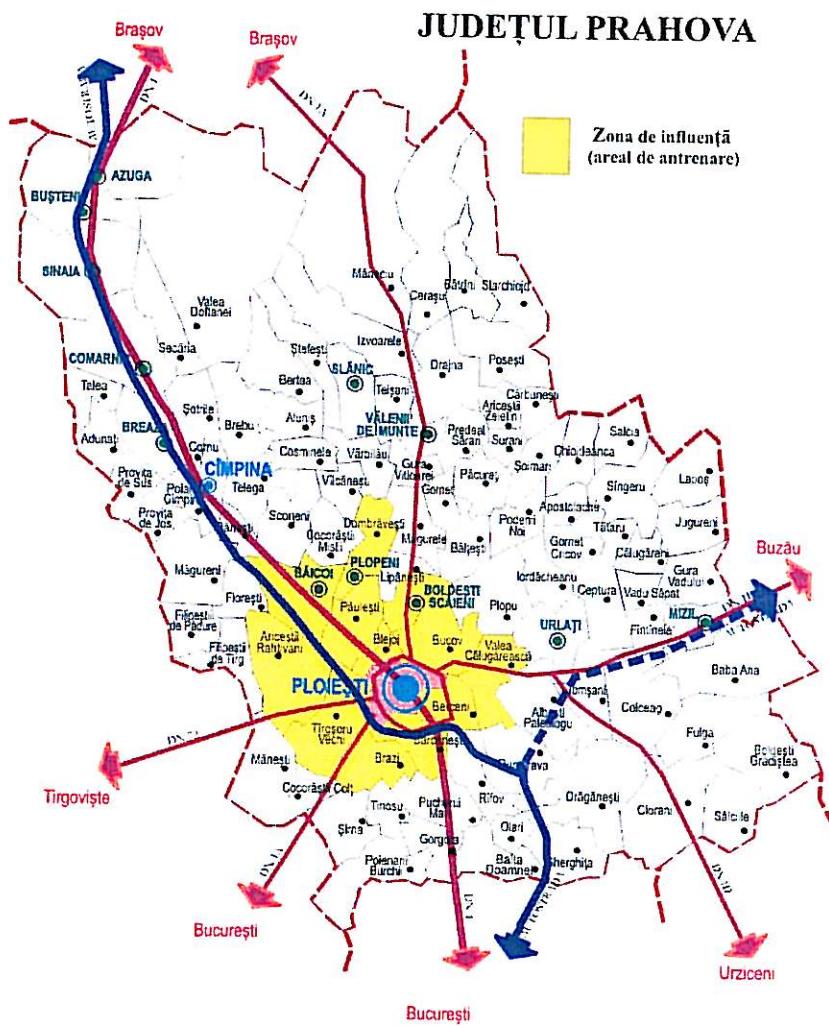

Fig. 2
Amplasarea municipiului Ploiești în cadrul județului Prahova
[sursa: Planul Integrat de Dezvoltare al Polului de Creștere Ploiești-Prahova]

Referitor la reteaua de localitati invecinate municipiului Ploiești, constatam ca acestea realizeaza o zona de influenta importanta, care determina o serie de deplasari de persoane si marfuri. In figura 3 este prezentata organizarea administrativ – teritoriala din zona de influenta a municipiului Ploiești care in ansamblu realizeaza polul de crestere Ploiești – Prahova.

Zona periurbana a municipiului Ploiești cuprinde urmatoarele localități:

Tabel 1

NORD	Orașe Comune	Băicoi Boldești - Scăieni Plopeni Blejoi Bucov Dumbrăvești Păulești
EST	Comune	Berceni Valea Căluărească
SUD	Comune	Bărcănești Brazi
VEST	Comune	Ariceștii Rahtivani Târgșoru Vechi

[sursa: Planul Integrat de Dezvoltare al Polului de Creștere Ploiești-Prahova]

Fig. 3

Organizarea administrativ teritorială din zona de influență a municipiului Ploiești
[sursa: Planul Integrat de Dezvoltare al Polului de Creștere Ploiești-Prahova]

2.2. Aspecte de dezvoltare a municipiului Ploiesti si a zonelor adiacente in contextul regional si national

Abordarile asupra unor unor aspecte legate de dezvoltarea mobilitatii sub aspect regional sau in context mai larg au in vedere paliere de analiza: demografia, produsul intern brut si motorizarea.

Master Plan de Transport Urban - Bucuresti, Sibiu si Ploiesti – elaborat de W.S.P. si asociatii, evidentaiza la nivel national o tendinta de descrestere a populatiei. La nivel regional aceeasi tendinta de descrestere se pastreaza proportional. In figura 4 sunt prezentate previziunile demografice la nivelul tarii estimate de diferite surse de prognoza.

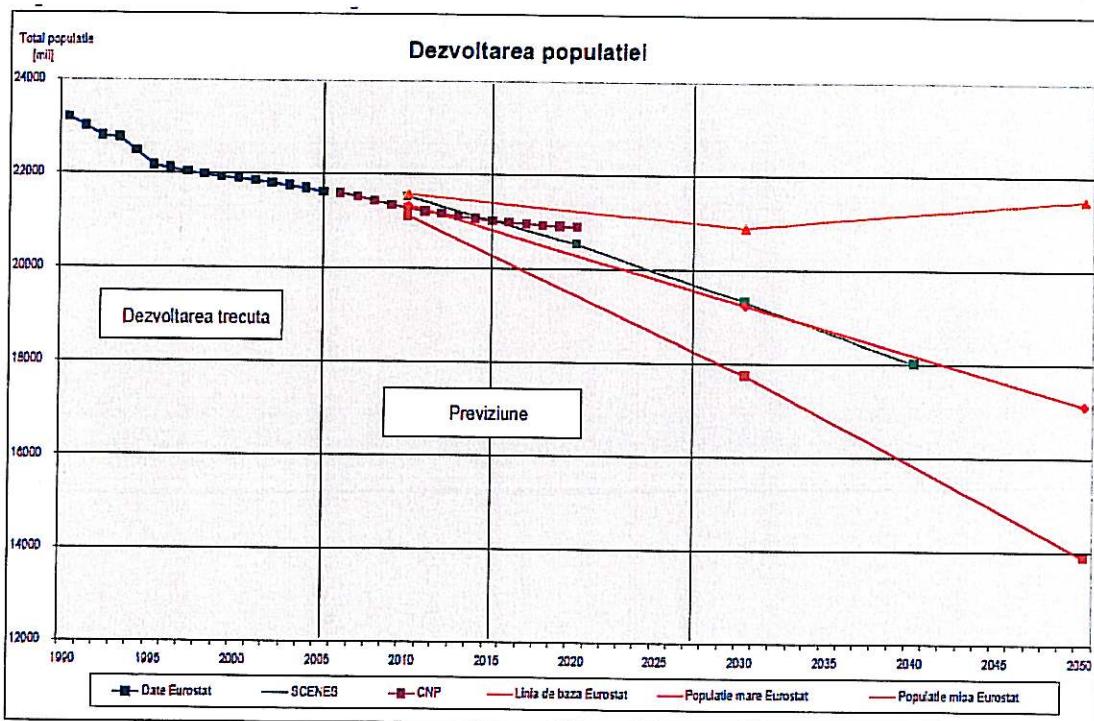

Fig. 4
Previziunile demografice la nivelul tarii
[sursa : Master Plan de Transport Urban - Bucuresti, Sibiu si Ploiesti]

In palierul parametrilor de analiza mentionati in paragraful anterior, estimarile formulate de acelasi master plan arata o tendinta de crestere a produsului intern brut (P.I.B.) pe un orizont de prognoza de 20 – 25 ani. In figura 5 este aratat graficul de tendinta pentru PIB in diferite scenarii de prognoza: EUROSTAT, C.N.P. si SCENES.

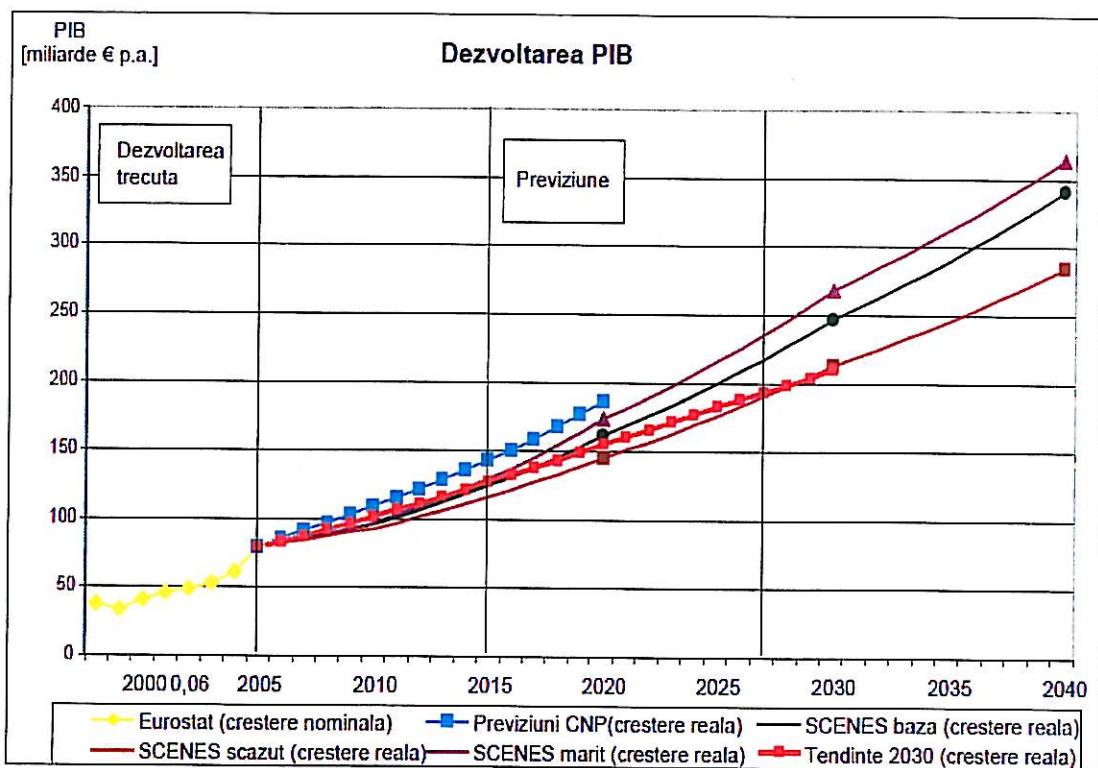

Fig. 5
Estimarea evolutiei Produsului Intern Brut
[sursa : Master Plan de Transport Urban - Bucuresti, Sibiu si Ploiesti]

Coreland previziunile mentionate mai sus constatam ca din punct de vedere economic, tendinta de scadere a populatiei si tendinta de sporire a PIB arata ca rezultat o crestere in termeni nominali a puterii de cumparare a populatiei. Din aceasta perspectiva constatam ca pentru perioada de prognoza, consumul populatiei va creste si implicit va spori achizitionarea de bunuri de consum. Este stiut faptul ca in tara noastra, la nivel larg, a existat din totdeauna disponibilitatea populatiei de a achizitiona autoturisme proprietate personala. Aceasta constatare este confirmata de dinamica cresterii gradului de motorizare din tara noastra. In fig. 6 este prezentata corelarea dintre gradul de motorizare si produsul intern brut.

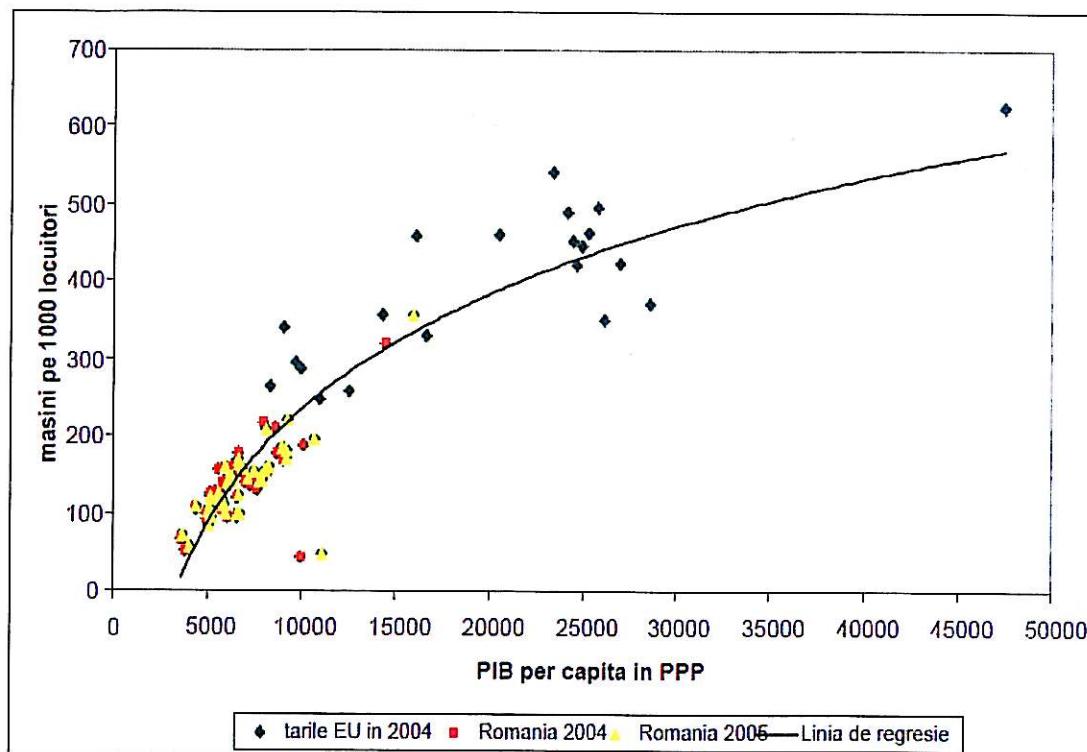

Fig. 6
Corelarea gradului de motorizare cu produsul intern brut
[sursa : Master Plan de Transport Urban - Bucuresti, Sibiu si Ploiesti]

Situatia parcului de autovehicule si a gradului de motorizare la nivel national sunt evidențiate în figurile 7 și respectiv 8.

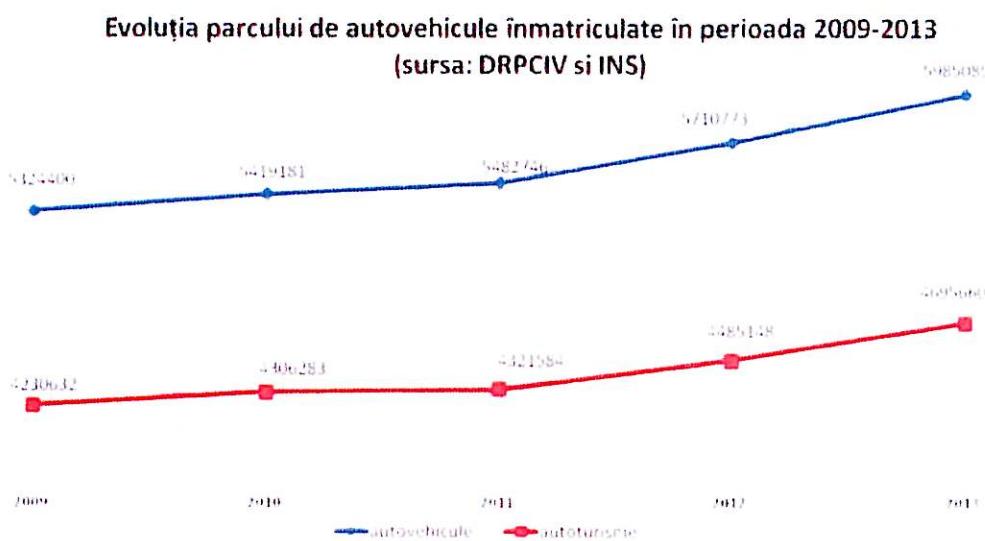

Fig. 7
Evolutia parcului de autovehicule in Romania
[sursa : Buletinul Sigurantei Rutiere – Raport anual 2013 – Inspectoratul General al Politiei]

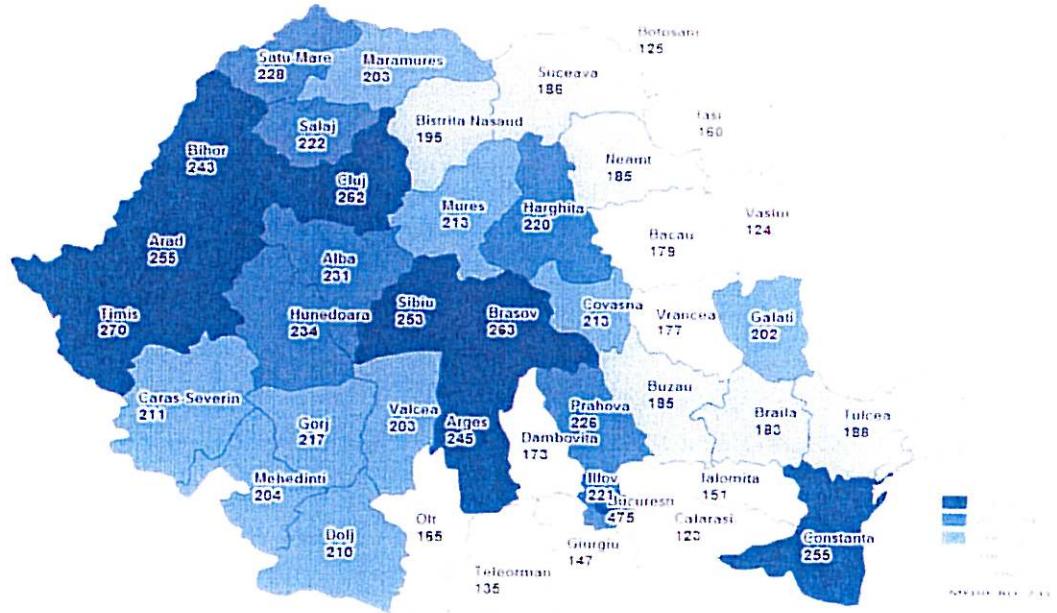

Fig. 8

Repartitia gradului de motorizare in Romania

[sursa : Buletinul Sigurantei Rutiere – Raport anual 2013 – Inspectoratul General al Politiei]

Din analiza datelor prezentate mai sus remarcam ca județul Prahova și implicit municipiul Ploiești se plasează în apropierea mediei naționale legate de indicatorul “grad de motorizare”: 226 auto/1000 loc pentru județ și circa 300 auto/1000 loc pentru municipiul Ploiești.

La nivel european Romania se poate considera o țară cu grad de motorizare modest 220 vehicule/ 1000 locuitori și cu o repartitie redusa a numărului de locuitori raportati la km de drum (tabel 2).

Tabel 2

Tara	Parc auto/autoturisme)	Populatie	Lungime totala a drumurilor (km)	Rata de motorizare (autoturisme/ 1000 locuitori)	Nr autoturisme / km de drum
Austria	4.584.000	8.219.743	124.580	558	37

Sursa: Asociatia Producătorilor și Importatorilor de Automobile

Analiza deplasarilor rutiere pe reteaua de drumuri indica o situatie deficitara care se traduce in conditii proaste pentru participantii la trafic. Din aceasta perspectiva se remarcă pe de o parte, sporirea parcului de vehicule si a indicelui de mobilitate cu o dinamica in timp foarte ridicata incepand cu anul 2007, iar pe de alta parte o retea rutiera la nivel national si la nivel local care a fost extinsa foarte putin. Pe baza acestor considerente se poate afirma ca in tara noastra calitatea serviciului de transport s-a depreciat substantial in ultimii 10 ani si tendinta de degradare se pastreaza si pentru viitorul apropiat. In figura 9 este prezentata evolutia procentuala a principalilor indicatori pentru traficul rutier.

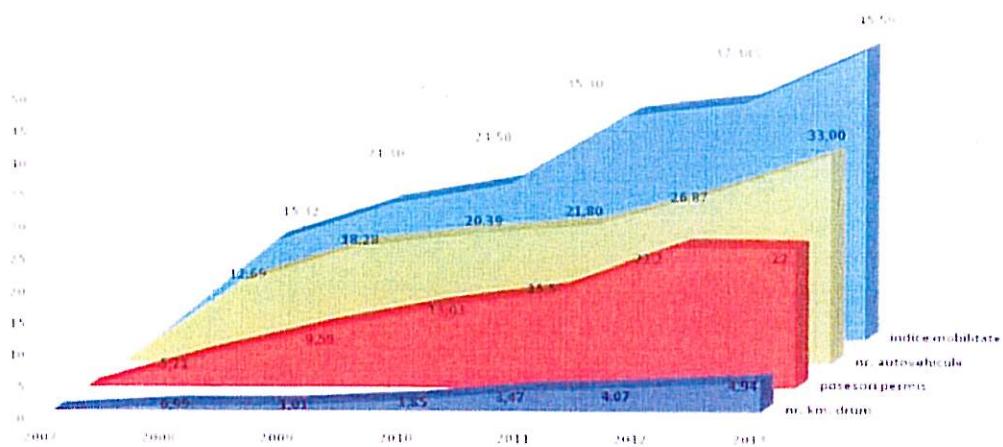

Fig. 9
Evolutia principalilor indicatori pentru traficul rutier
[sursa : Buletinul Sigurantei Rutiere – Raport anual 2013 – Inspectoratul General al Politiei]

3. Stadiul actual de realizarea proiectelor de infrastructura prevazute in studiile de urbanism anterioare

In vederea realizarii studiului de fundamentare pentru actualizare P.U.G. – Ploiesti au fost consultate principalele documente urbanistice care au definit politica de investitii in infrastructura urbana. In acest sens s-au analizat: "Plan General de Urbanism" ed. 1999 si "Master Plan de Transport Urban – Bucuresti, Sibiu si Ploesti - Raport Final Ploesti". In cadrul acestor documente, insusite de catre administratia municipiului, sunt prezentate o serie de propuneri cu privire la directiile de actiune sau chiar proiecte in vederea realizarii. In raport de documentele prezentate de catre beneficiar, in prezenta analiza a fost retinuta lista investitiilor in domeniul infrastructurii de transport implementate sau in curs de implementare, prezentate de care Directia Tehnica de Investitii a Primariei Ploesti. Analiza stadiului de implementare a propunerilor urbanistice s-a realizat prin consultatii directe cu institutiile locale cu atributii in domeniul circulatiei din municipiul Ploesti si prin verificari pe teren. In tabelul 3 sunt prezentate sintetic listele proiectelor propuse administratiei locale si statiile de implementare a acestora.

LISTELE PROIECTELOR PROPUSE ADMINISTRATIEI LOCALE SI STATILE DE IMPLEMENTARE A ACESTORA

Tabel 3

PLANUL DE URBANISM GENERAL 1999 – prelungit 2009			
Capitolul propunerilor din P.U.G. 1999	Pozitia propunerilor in PUG	Propunere formulata in documentatia de urbanism	Stadiul de realizare la nivelul anului 2015
4.2. EVOLUTIA POSIBILA, PRIORITATI			
	4.2.8.1. Circulatii rutiere		
		Realizarea unor artere de circulatie majore de categoria a I-a si a II-a	Nu s-au realizat
		Rezolvarea circulatiei in zona centrala	Propunere a fost realizata parcial. Strazi modernizate: Tache Ionescu; Gh. Lazar; Dobrogeanu Gherea
		Rezolvarea legaturii est-vest	Nu s-a realizat
		Rezolvarea circulatiei ocolitoare pentru traficul greu si de tranzit	Propunere a fost realizata parcial. Varianta de ocolire vest
		Amenajarea intersectiilor principale de pe traseele majore	Propunere a fost realizata parcial. Intersecția DN1A – centura est (Blejoi) - giratie

	Pasaje denivelate peste calea ferata pe directiile principale (pasaje noi sau exinderii).	Propunere a fost realizata parțial. DJ 101D – str Tatarani – exindere DN72 – str. Cantacuzino – spre Targoviste Prelungire Marasesti – Gara de Vest - in executie 2015
	Dublarea numarului de benzi pe centurile vest si nord	Propunere a fost realizata parțial pentru centura de nord Propunerea s-a realizat pentru centura de vest
	Realizarea de noi parcuri in zonele de locuit	Propunerea s-a realizat in principal in zonele cu locuinte collective (blocuri).
	Marirea numrului de locuri de parcare sau garare din zona centrala	Propunerea s-a realizat in principal in zonele: piata de alimente, Palatul Administrativ, magazin Omnia, str Cuza-Voda.
	Exinderea transportului in comun interior si catre localitatile din perurban	Propunerea s-a realizat in principal prin promovarea transportului de persoane de catre societatile private de transport.
	Pasaje denivelate intre penetratii si centura	Propunere a fost realizata parțial – pasaj denivelat intre DN1B – centura de est – (Paulesti).
	Strapungere de categoria a II-a intre garile de vest si sud.	Nu s-a realizat
	Exinderea traseelor de trolebuze	Propunere a fost realizata – fara a se putea preciza daca exinterile sunt suficiente
	Compleierea si modernizarea parcului de autobuze	Propunere a fost realizata

	Parcaje tampon la intrarile in municipiu	Propunere a fost realizata parcial – parcaj realizat la intrarea Dj102 – str Gageni
Noi autogari		Propunere a fost realizata parcial – autogara realizata la intersecția sos Nordului – str Gageni
	Traseu nou pentru centura de nord Bucov - Boldesti - Blejoi	Nu s-a realizat
4.2.8.2. Circulatii feroviare		
	Electrificarea cailor ferate: Ploiești – Valeni și Ploiești – Târgoviște.	Nu s-au realizat
	Triplarea magistralelor: București – Brașov și București – Buzău.	Nu s-a realizat
	Masuri pentru reducerea poluării întreprinderilor aferente S.N.C.F.R.	Nu s-au realizat
	Accese pietonale subterane / aeriene la perioanele din stații.	Propunere a fost realizata în stațiile: Gara de Vest și Gara de Sud
4.2.8.3. Circulatii aeriene		
	Transformarea și modernizarea aeroportului sportiv – scoala Strejnic in aeroport pentru curse charter.	Nu s-a realizat

	Helioporturi in Strejnic si Ploiesti (zona hipodrom).	Nu s-au realizat
4.2.8.4. Alte probleme de circulatii		
	Trasee pietonale catre zonele de agrement Bucov si Paulesti Piste biciclisti spre zonele de agrement	Propunere a fost realizata
		Propunere a fost realizata – zona din vecinataea sali sporturilor Olimpia
		Situatia actuala: <ul style="list-style-type: none">◦ pasajul pietonal pe bd. Republicii este <u>deschis</u> intre Palat administrativ si Complexul Comercial Omnia;◦ pasajul pietonal pe str. C.D. Gherea este <u>inchis</u>;◦ pasajul pietonal pe Bd. Bucuresti (zoza cladirii Timken) ea este <u>inchis</u>;◦ pasajul pietonal pe Bd. Bucuresti la intersecția cu str. Petrolului este <u>inchis</u>;
	Piste pentru rolleri in zonele verzi si de agrement	Propunere a fost realizata in zona salii sporturilor Olimpia
Capitol 5 - DECATLOG		
	Pct. 3	Sistematizarea circulatiei in zona centrala
	Pct. 6	Strapungere strada 4 benzi (intre garile Vest si Sud).
		Propunere a fost realizata parcial. Strazi modernizate: Tache Ionescu; Gh. Lazar; Dobrogeanu Gherea
		Nu s-a realizat

MASTER PLAN DE TRANSPORT URBAN – BUCURESTI, SIBIU SI PLOIESTI

- Raport Final Ploiești – European Aid/ 123579/D/SER/RO

Proiect	Propunere formulata in proiectele propuse	Stadiul de realizare la nivelul anului 2015
Proiecte de infrastructura rutiera		
	Pasajul subteran Marasesti	Propunerea este se realizeaza in zona Garii de vest - investitia este in desfasurare
	Pasajul suprateran Depoului intre strada Rudului si zona Mimiul	Nu s-au realizat
	Pasajul suprateran Rafov intre strada Lupeni si strada Rafov	Nu s-au realizat
	Două noi legături paralele cu râul Dâmboiu de la strada Gageni la strada Strandului	Nu s-au realizat
	Închiderea Centurii Interne – faza I: legătură între strada Vestului – strada Depoului	Nu s-au realizat
	Închiderea Centurii Interne – faza II: lărgirea străzii Depoului și legătură între strada Depoului și strada Mircea cel Batran	Nu s-au realizat
	Închiderea Centurii Interne – faza III: legătură între strada Mircea cel Batran și strada Cornatei	Nu s-au realizat
	Închiderea Centurii Interne – faza IV: lărgirea străzii Cornatei	Nu s-au realizat

	Lărgirea drumului național 1B la patru benzi Lărgirea străzii Gageni și a drumului județean 102	Nu s-au realizat
	Racordarea între drumul național 1B și strada Gageni	Propunerea s-a realizat
	Lărgirea la patru benzi a rutei ocolitoare Ploiești Vest	Propunerea s-a realizat
	Pasaj inferior la nivel la intersecția Tache Ionescu bulevardul Independenței	Propunerea s-a realizat
Transport Public: Ploiești		
	TRAM – Prioritate pentru tramvaie – Traseul 102 – Intersecția dintre Soseaua Vestului și strada Gh. Gr. Cantacuzino (Verde atunci când tramvaiul trece prin intersecție) (3,2 km)	Nu s-au realizat
	TRAM – Prioritate pentru tramvaie – Traseul 101 intre Restaurant Nord și Banca Comercială (Str Valenii) via Str. Gh. Doja (1,5 km)	Nu s-au realizat

	TRAM - Prioritate pentru tramvaie – Traseul 101 intre Restaurant Nord si Banca Comerciala (Str Valeni) via Str. Gh. Doja. (0.6 km)	Nu s-au realizat
	TRAM - Prioritate pentru tramvaie, Linile 101/102 intre Restaurant Nord si Spitalul Județean (2 km)	Nu s-au realizat
	TRAM – Prioritate in tersectie, Linia 102, int Soseanu Vestului si str Gh. Gr. Cantacuzino	Nu s-au realizat
	TROLLEYBUS – Junction priority, Route 244, entering terminus at end of route at Malu Rosu	Nu s-au realizat
	TROLLEYBUS – Junction priority, Route 244, exit from Elena Doamna St to Bdul. Republicii si intersecția Str. Vasile Lupu – Str. Trei Ierarhi	Nu s-au realizat
	TROLLEYBUS – Junction priority, Route 244, crossing between Pod Inalt St and Malu Rosu St.	Nu s-au realizat

	BUS/TROLLEYBUS – Junction priority for all routes departing from Coreco Hale stop into Carpati St.	Nu s-au realizat
	ALL MODES – Improved interchange at Gara de Sud (bus, trolleybus and tram)	Nu s-au realizat
	ALL MODES – Improved interchange at Hale Coreco (bus and trolleybus)	Nu s-au realizat
	ALL MODES – Improved interchange at Restaurant Nord (bus and tram)	Nu s-au realizat
	TRAM – New extension of track to connect Route 101 at Gara de Sud with Route 102 at Gara de Vest.	Nu s-au realizat
	ALL SURFACE MODES - Development of a Public Transport Stop Hierarchy and subsequent upgrade of facilities	Nu s-au realizat

	ALL MODES - Implementation of an integrated ticketing system	Nu s-au realizat
	ALL MODES - Implementation of a supporting passenger information strategy	Nu s-au realizat
	ALL MODES - Implementation of a comprehensive marketing strategy	Nu s-au realizat
PROIECTE REALIZATE DE CATRE PRIMARIA MUNICIPIULUI PLOIESTI – în perioada 2010 - 2014		
- cf. lista prezentată de către Direcția Tehnică de Investiții		
	Denumirea proiectului	
1	Cresterea mobilității transportului public prin reabilitarea traseului tramvaiului 102 cu lucrari vizand calea de rulare, statii cu persoane adaptate persoanelor cu dizabilitati, material rulant, elemente de semnalizare si automatizare - etapa II: B-dul Republicii- Bucla Vest	
2	Cresterea mobilității transportului public prin reabilitarea traseului tramvaiului 101 cu lucrari vizand calea de rulare, statii cu persoane adaptate persoanelor cu dizabilitati, material rulant, elemente de semnalizare si automatizare- etapa-I	
3	Cresterea mobilității transportului public prin reabilitarea traseului tramvaiului 101 cu lucrari vizand calea de rulare, statii cu persoane adaptate persoanelor cu dizabilitati, material rulant, elemente de semnalizare si automatizare–etapa II	

4	Accesibilitate si fluidizare trafic catre zona industriala Ploiesti Vest si Platforma industriala Brazi
5	Modernizare strada Rafov
6	Amenajari loc de joaca , loc de odihna si terenuri de sport Alleea Catinei nr.11P Cartier Nord
7	Refacere sistem rutier strada Dragos Voda
8	Modernizare strada Crangului (tronson str. Craitei si str. Dumbravei)
9	Modernizare strada Lanariei
10	Modernizare strada Lunca Prutului
11	Refacere sistem rutier strada Bucegi
12	Modernizare strada Rubinelor
13	Modernizare strada Motilor
14	Modernizare strada Mitropolit Varlaam
15	Modernizare strada Ana Lujojana
16	Modernizare strada Santiierului
17	Modernizare strada Saturn tr. I

18	Refacere sistem rutier strada Muntii Dobrogei
19	Modernizare strada Uranus
20	Modernizare strada Cercului
21	Modernizare strada Codrii Cosminului
22	Refacere sistem rutier strada Zmeului
23	Modernizare strada Azuga
24	Modernizare strada Bustenari
25	Modernizare strada Tanarul Muncitor
26	Modernizare strada Neptun
27	Modernizare strada Traian
28	Modernizare strada 13 Septembrie
29	Modernizare strada Victoriei
30	Modernizare strada Grigore Alexandrescu
31	Modernizare strada Scaieni

32	Modernizare strada Izvoare
33	Modernizare strada Munteniei
34	Modernizare strada Alecu Russo
35	RK strada Rapsodiei
36	RK str. Bobalna
37	RK str. Ghe. Doja (tronson str. Romana - sens giratoriu Bariera Bucov)
38	Modernizare strada Pacureti
39	Amenajare parcare blocuri 6,7 str. Sg. Ghe.Mateescu
40	Amenajare parcare str. Raristei (Gradinita 10)
41	Amenajare parcare bl.120 F(str. Enachita Vacarescu), bl.120 E (str.Vitejilor)
42	Amenajare parcare Vest I strada Slt Erou Moldoveanu Marian etapa II(P 9)
43	Amenajare parcare Vest I strada Slt Erou Moldoveanu Marian etapa III (P 10,P11)
44	Amenajare parcare strada G-ral Eremia Grigorescu nr.20 P

45	Amenajare parcare strada C-tin Brezeanu bloc 202
46	Modernizare strada Titan
47	RK Republicii (P-ta Mihai Viteazul - Catedrala)
48	Refacere sistem rutier strada Hanibal
49	Refacere sistem rutier strada Petre Negulescu
50	Refacere sistem rutier strada Petroniu
51	Refacere sistem rutier strada Transformatorului
52	Refacere sistem rutier strada Vasile Boierescu
53	Modernizare strada Petru Poni
54	Modernizare strada Cicero
55	Modernizare strada Fecioarei

56	Modernizare strada Posada
57	Modernizare strada Pricipalele Unite
58	Refacere sistem rutier strada Eufrosin Poteca
59	Refacere sistem rutier strada Agricultori
60	Refacere sistem rutier strada Dumbraveni
61	Refacere sistem rutier strada Bogdan Voda
62	Modernizare strada Sevastopol
63	Refacere sistem rutier strada Caminelor
64	Refacere sistem rutier strada Gazetei
65	Refacere sistem rutier strada Cioplea
66	Refacere sistem rutier strada Inotesti

67	Refacere sistem rutier strada Moreni
68	Modernizare strada Tinteia
69	Modernizare strada Vintileanca
70	Modernizare strada Baicoi
71	Modernizare strada Ghighiului
72	Modernizare strada Livezilor
73	Modernizare strada Titeiului
74	Modernizare strada Gandului
75	Modernizare strada Pescarus
76	Modernizare strada Arnata
77	Modernizare strada Cerasului
78	Modernizare strada Trompetei
79	Modernizare strada Zorilor
80	Modernizare strada Otelului

81	Modernizare strada Clabucet
82	Modernizare strada Olimpului
83	Modernizare strada Boian
84	Modernizare strada Aron Voda
85	Modernizare strada Graniceri
86	Modernizare strada Albisor
87	Modernizare strada Corabiei
88	Modernizare strada Tomis
89	Modernizare strada Poet Dimitrie Anghel
90	Modernizare strada Tinerimii
91	Modernizare strada Albesti

92	Modernizare strada Pictor Barbu Iscovescu
93	Modernizare strada Gheorghe Sion
94	Modernizare strada Grausorului
95	Modernizare strada Chindiei
96	Modernizare strada Turnatorului
97	Modernizare strada Salvador
98	Modernizare strada Graur
99	Modernizare strada Oituz
100	Modernizare strada Diaconu Coresi
101	Modernizare strada Bodocului
102	Modernizare strada Amzei

103	Modernizare strada Cap. Traian Dumitrescu
104	Modernizare strada Fagaras
105	Modernizare strada Corlatesti
106	Drumuri si accese Cartier Ghighiu (Brazi,Tinosu,Pietrosani,Tatarani,Sirna ,Draganesti)
107	Reabilitare sistem rutier strazi Cartier 9 Mai
108	Modernizare Cartier Enachita Vacarescu
109	Modernizare Cartier Malu Rosu
110	Reparatii curente pasaj Gara de Sud
111	Reparatii capitale strazi si parcuri betonate, inclusiv canalizare, Cartier Mihai Bravu
112	Amenajare parcuri str. Ghe. Lazar si intersecția cu str. Stefan cel Mare si Dr. Bagdazar
113	Modernizare strada Dr. Bagdazar (tronson str.Gh.Lazar-str.N.Balcescu)

114	Modernizare strada Caineni
115	Modernizare si reabilitare strazi, inclusiv canalizare si racorduri Cartier Bereasca
116	Amenajare parcuri B-dul Republicii si str. Ghe. Doja tr. III-IV
117	Amenajare parcuri B-dul Republicii si str. Ghe. Doja tr. I-II
118	Amenajare parcuri B-dul Republicii si str. Ghe. Doja tr.V
119	Amenajare parcuri cu date ecologice zona nord, zona vest si zona central-sud-est
120	Reparatii capitale strada Podul Inalt
121	Reparatie capitala strada Lapusna
122	Reabilitare si amenajare parcuri bl.35 A-G strada Malu Rosu
123	Modernizare strada Pielari(tronsonul cuprins intre str. Carpenului si str. Alexandru Vlahuta)
124	Modernizare strada Splaiului (tronson cuprins intre strada Negru Voda si strada Dragos Voda)

125	Amenajare accese si parcuri zona strazii Soldat Erou Arhip Nicolae- inclusiv proiectare
126	Amenajare parcare B-dul Republicii bl. A5, Aleea Codrului si Aleea Vlastei
127	Reparatii capitale strada C-tin Brezeanu
128	Modernizare Cartier Penes Curcanul
129	Reparatii capitale parcuri si accese cuprinse intre B-dul Bucuresti si str. Barcanesti si intre B-dul Bucuresti si strada Industriei
130	Refacere sisteme rutiere strazi Cartier Rafov (Petru Cercel, jilui, Dr.Ghe.Petrescu, Crisului, Cosmesti, Bihorului, Fundatura Petrolului, Arges, Intrarea Sticlarului, Intrarea Clubului)
131	Modernizare strazi Cartier Gheorghe Doja, inclusiv proiectare
132	Modernizare strazi Cartier Gageni
133	Refacere pavaj Palat Administrativ
134	Amenajare parcuri Cartier Enachita Vacarescu
135	Amenajare esplanada Casa de Cultura a Sindicatelor

136	Amenajare pavaj pietonal Complex Nord si parcuri
137	Amenajare parcare si pietonal strada Toma Caragiu (proiectare+executie)
138	Refacere sistem rutier strada Costilei, Salva Viseu, Tunari
139	Modernizare strazi in municipiul Ploiesti (proiectare si executie) - Fratiei, Horatiu, Peris- inclusiv canalizare, Ecoului, drum acces Ploiesti Traj, Barzava, Aurora, Vidinului, Zanelor- inclusiv canalizare, Brazdei, Berzei, Dambovita- inclusiv canalizare, Rotari, Acarului, Lemnari - inclusiv canalizare, Dezrobirii - inclusiv canalizare, Neajlov- inclusiv canalizare, Olteni- inclusiv canalizare
140	Modernizare strada Varful cu Dor
141	Modernizare strada Cheia, inclusiv canalizare
142	Amenajare exteriora Sala Sporturilor Olimpia
143	Loc de odihna zona Casa Cartii
144	Loc de odihna zona Piata
145	Modernizare strada Caraorman (inclusiv canalizare)
146	Amenajare parcare strada Ghe. Doja (vis a vis SGU)

147	Sens giratoriu intersectie B-dul Republicii si strada Laboratorului
148	Modernizare strada Mihai Bravu (tronson cuprins intre Nicolae Balcescu si strada Apelor)
150	Modernizare str. Banesti (tronson cuprins intre str. Zidari si B-dul Republicii)
151	Modernizare str. Sinaia (tronson cuprins intre str. Zidari si B-dul Republicii)

PROIECTE REALIZATE SAU IN CURS DE IMPLEMENTARE DE CATRE PRIMARIA MUNICIPIULUI PLOIESTI
- cf. lista prezentata de catre Directia Tehnica de Investitii

	Denumirea proiectului	Stadiul de implementare	Sursa de finantare
1	Strapungere strada Grindului si amenajare parcare cu pavale inierbate (proiectare+executie)		buget local
2	Modernizare str. Toma Ionescu		buget local
3	Modernizare str. Rares Voda		buget local
4	Modernizare strada Panciu		buget local
5	Parcare supraterana str. Cuza Voda		buget local

6	Drum acces din strada Libertatii (proiectare + executie)		budget local
7	Amenajare loc de odihna str. Ghe. Doja (proiectare+executie)		budget local
8	Amenajare scuar zona nord str. Gageni bloc 110-111 (proiectare+executie)		budget local
9	Creare pasaj de trecere intre strada Depoului si strada Mimiului	in procedura de achizitie	credit intern
10	Asigurarea mobilitatii traficului prin prelungirea legaturii rutiere si de transport public intre Gara de sud si Gara de vest (strada Libertatii), inclusiv lucrarile de reabilitare a domeniului public al pieptelor si garilor	Faza proiectare	fonduri europene
11	Accesibilitate si fluidizare trafic catre zona industriala Ploiesti Vest si platforma industriala Brazi - Supralargire strada Marasesti	Faza proiectare	fonduri europene
12	Cresterea accesibilitati in partea de est a municipiului Ploiesti catre cordonul PAN european TEN IX prin realizarea pasajului rutier peste CF, in partea de S-E a municipiului Ploiesti	Faza proiectare	fonduri europene
13	Cresterea mobilitatii traficului prin realizarea terminalului multimodal incluzand si spatiu de parcare pentru moduri de transport auto si biciclete (zona Spital Judetean) in municipiu Ploiesti	Faza proiectare	fonduri europene
14	Realizare drum acces parc municipal Vest	Faza proiectare	
15	Transformarea autobuzelor din functionare Diesel in functionare cu gaz petrolier lichefiat	Faza proiectare	fonduri Ministerul Mediului si Schimbarilor Climaterice

Ca o consideratie generala se poate afirma ca in perioada de timp 1999 – 2015 pe durata de valabilitate a Planului Urbanistic General, administratia locala a fost preocupata de imbunatatire conditiilor de transport in municipiul Ploiesti si in zonele periurbane invecinate. Avand in vedere faptul ca in aceasta perioada au existat o serie de situatii obiective cu conotatii socio-economice nefavorabile, o serie de proiecte nu au putut fi implementate sau chiar nu au fost incepute.

4. Reteaua de transport in municipiul Ploiesti

4.1. Considerente asupra infrastructurii rutiere

4.1.1. Conexiuni rutiere a municipiului Ploiesti

Municipiul Ploiesti reprezinta un nod important ce comunicatie rutiera care asigura legaturile rutiere in teritoriu atat in zona de influenta urbana catre localitatile invecinate, cat si un element de conexiune pentru traficul de tranzit pe directia nord-sud (Bucuresti – Brasov), dar si pe directie est- vest Targoviste – Buzau). Din aceasta perspectiva putem considera ca mobilitatea rutiera a orasului este influentata atat de traficul intern cat si de traficul pendular.

Referitor la traficul de tranzit pe directia nord-sud (Bucuresti – Brasov), acesta beneficiaza de variante ocolitoare orasului. Varianta de ocolire vest este caracterizata de amenajari rutiere care asigura o capacitate de circulatie ridicata. Pe acest tronson, drumul se suprapune peste traseul DN1. Varianta de ocolire vest are in sectiune transversala 4 benzi de circulatie, iar toate intersectiile la nivel sunt amenajate cu circulatie in sistem giratoriu. Intersectiile cu calea ferata sunt denivelate cu pasaje superioare modernizate.

Centura de est reprezinta o varianta de ocolire a orasului caracterizata de amenajari geometrice ale traseului cu numai 2 benzi de circulatie in sectiune transversala, (una pe fiecare sens). Traseul acestei variante se suprapune cu o portiune a drumului national DN1A. Intersectiile la nivel sunt parcial modernizate, iar unele traversari ale caii ferate se realizeaza la invel. Din aceasta perspectiva ce constata ca pe aceasta varianta de ocolire participantii

la trafic intampina o serie de restrictii atat pe traseu cat si in intersectii si la trecerile la nivel cu calea ferata. Vitezele de deplasare pe aceasta varianta sunt sensibil mai mici fata de varianta de ocolire vest. Rezultatul acestei situatii se traduce pentru participantii la trafic printr-o durata mai mare de deplasare (intarzieri mai mari) si printr-un mediu rutier care ofera conditii de siguranta rutiera sensibil mai reduse.

Solutia de ocolire prin partea de nord a municipiului Ploiești este actualmente o combinatie de tronsoane rutiere formate din urmatoarele drumuri: DN1B si DN1A. In figura 10 sunt indicate variantele ocolitoare ale municipiului Ploiești [sursa: www/google maps].

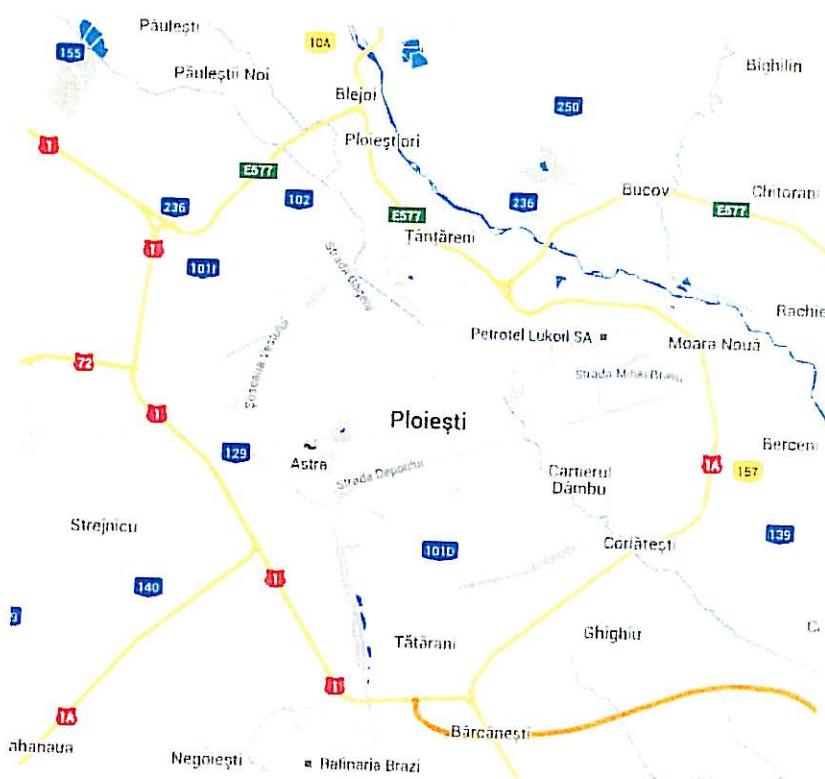

Fig. 10
[sursa: www/google maps].

Accesul rutier in municipiul Ploiești este asigurat de o retea vasta de drumuri nationale si drumuri judetene:

- Autostrada A3 - tronson Bucuresti – Ploiești
- Drumuri nationale:
 - DN1 - tronsoanele Bucuresti – Ploiești si Ploiești – Brasov

- DN1A – tronsoanele Bucuresti– Ploiesti via Buftea si Ploiesti - Brasov via Valeni
- DN1B – tronson Ploiesti – Buzau
- DN 72 – tronson Ploiesti Targoviste
- *Drumuri judetene:*
 - DJ101I – Ploiesti Nedelea
 - DJ102 – Ploiesti – Paulesti – Slanic
 - DJ101D – Ploiesti – Rafov
- *Drumuri comunale:*
 - DC92 – Ploiesti – Berceni
 - DC22A – Ploiesti Ghighiu

Referitor la tronsonul de autostrada A3 care leaga centura Ploiesti cu centura Bucuresti se poate afirma ca in momentul actual aceasta legatura este utilizata sub parametrii de trafic estimati prin studiile de fezabilitate. Aceasta situatie se explica prin faptul ca legatura rutiera la centura Bucuresti reprezinta o solutie tranzitorie de functionare cu un grad de aglomerare mare si pentru care utilizatorii inregistreaza intarzieri in trafic la intrarea in capitala. Pe de alta parte acest tronson de autostrada nu asigura dacat foarte putine legaturi pe traseu la localitatile amplasate intre Bucuresti si Ploiesti. Din aceste motive multi participanti la trafic prefera traseul vechiului drum DN1 care din pacate traverseaza toate localitatile intre Bucuresti si Ploiesti. Pe traseul autostrazii A3 acoperirea cu semnal pentru telefoane mobile este asigurata partial.

Perspectiva realizarii autostrazii intre Ploiesti si Brasov reprezinta in momentul actual un set de dorinte care nu poate fi concretizat in proiecte finantabile. Estimam ca pentru un orizont de timp apropiat nu sunt intrunite conditiile de a definitiva solutii de finantare si executie a autostrazii catre Brasov.

4.1.2. Reteaua de strazi

Reteaua rutiera urbana a municipiului Ploiesti este formata din circa 800 strazi care insumeaza o lungime de aproximativ 320km (cf. P.U.G.1999 – pf. 2.4.1).

Aspectul general al retelei rutiere este de tip radial – inelar. Tronsoanele inelare nu asigura continuitate in deplasari, pe anumite portiuni participantii la trafic sunt obligati sa foloseasca variante ocolitoare. Forma retelei stradale este rezultatul evolutiei in timp a orasului.

Evolutia intravilanului municipiului Ploesti sec XVII – 1810 -1840 -1930 – 1960 – 1995, prezentata in figura 11 explica configuratia retelui stradale a orasului si dezvoltarea in timp a acesteia. Din studierea documentelor cu caracter istoric in paralel cu analiza retelei stradale existente pe teren se constata ca in zona "orasului vechi" reteua rutiera prezinta un tesut urban neomogen cu conexiuni rutiere scurte si cu un grad de sinuozitate a strazilor foarte ridicat. Putem afirma ca in aceasta parte a orasului traseele rutiere (strazile) sunt de fapt spatiile libere ramase intre proprietati care nu se poate inscrie intr-o gandire urbanistica coerenta.

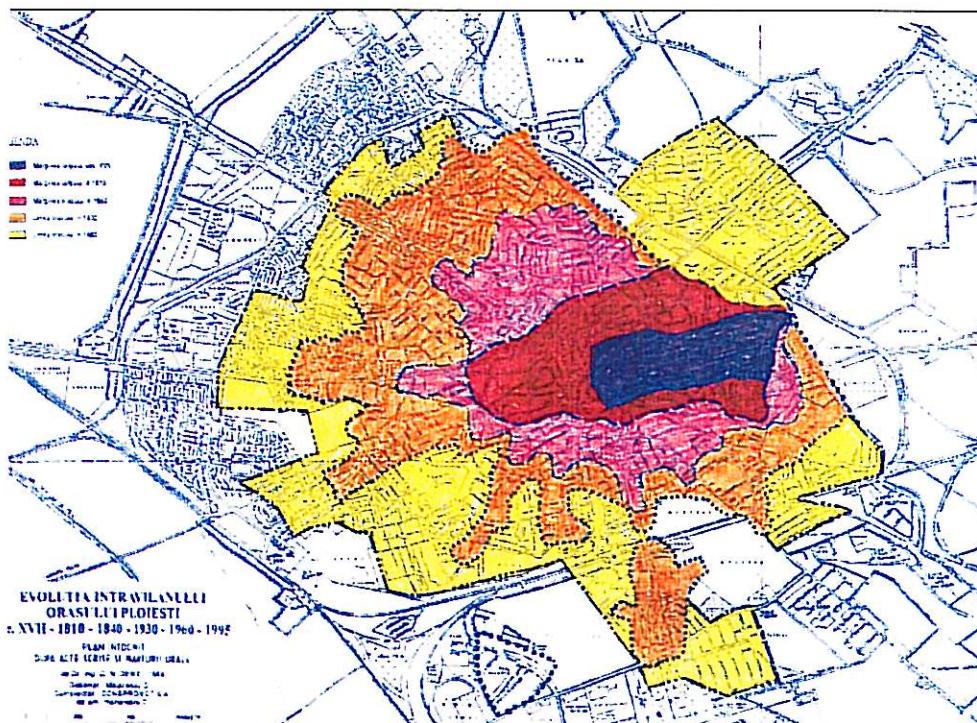

Fig. 11
Evolutia intravilanului municipiului Ploesti
[sursa: Contract CONSPROJECT nr.30/10941 – planşa anexă la P.U.G. Ploieşti - 1999]

Trebuie mentionat faptul ca in zona centrală și estică a orasului exista un tesut urban in care predomina locuintele individuale. In aceste zone, trama stradală are un aspect neregulat, cu un grad de sinuozitate sporit, fapt care determina

viteze de circulatie modeste si pe cale de consecinta o capacitate de circulatie redusa. Strazile din aceste zone pot fi incadrate in categoria a III-a (2 benzi).

Dezvoltarea orasului modern, incepand cu anii 1960 determina abordari diferite asupra conceptului de locuire astfel incat in zona de vest, zona in care se continua dezvoltarea orasului, incepe sa apara locuintele colective (blockurile de apartamente), care determina realizarea unor artere de circulatie cu capacitate de trafic mai mare si care au mai multe benzi de circulatie in sectiune transversala. In cadrul acestor forme urbane arterele de circulatie rutiera sunt caracterizate prin spatii de deplasare cu sectiuni transversale care cuprind mai multe benzi de circulatie pentru vehicule, incadrate cu spatii pentru pietoni (trotuare), precum si unele spatii verzi. Strazile din aceste zone pot fi incadrate in categoria I si a II-a.

Reteaua rutiera actuala a municipiului Ploiesti cuprinde pe directia nord – sud o importanta axa de circulatie reprezentata de: Bd. Republicii – Bd. Independentei si Bd. Bucuresti. Aceasta conexiune rutiera este formata de strazi de categorie I si II cu 6 si respectiv 4 benzi de circulatie in sectiune transversala.

Referitor la conexiunile pe directia est – vest, acestea sunt deficitare. Remarcam doar doua artere str. Gh. Grigore Cantacuzino si parcial Gh. Doja care asigura partial deplasările transversale orasului. Mentionam ca aceste artere nu sunt conectate direct si in plus nu au aceleasi caracteristici geometrice in sectiune transversala care sa asigure volume ridicate de trafic. In figura 12 este prezentata de principiu trama stradală principală a municipiului Ploiesti [sursa www/google/maps]. In plana nr. 1 a prezentului studiu este evidențiată reteaua principală de strazi și categoria fiecareia.

Fig. 12
Reteaua stradală în zona centrală a municipiului Ploiești
[sursa www.google maps]

4.2. Considerente asupra infrastructurii de cai ferate

Municipiul Ploiești, spre deosebire de ale centre urbane din țara noastră, are o configurație a rețelei de cai ferate cu un caracter particular. Remarcăm că zona principală de dezvoltare a orașului, s-a realizat în timp în interiorul unei rețele de cai ferate care practic înconjoară orașul. Această configurație a rețelei de cai ferate oferă o serie de avantaje asupra mobilității către exteriorul orașului, dar și o serie de inconveniente legate în principal de limitarea extinderii libere a spațiului construit. Din analiza planului de situație a municipiului Ploiești constatăm că o parte din arterele de circulație urbană, dar și o serie de drumuri de acces în oraș intersectează rețea de cai ferate. Intersecțiile dintre caile de circulație rutieră cu rețea de cai ferate determină amenajări specifice fie treceri la nivel cu bariere, sau pasaje denivelante. Trecerile la nivel cu bariere determină pe rețea rutieră întârzieri ale traficului de vehicule și în același timp favorizează puncte dificile în trafic sub aspectul siguranței rutiere. Pasajele denivelante elimină dezavantajul întârzierilor în traficul rutier, dar implica cheltuieli importante pentru construcția pasajelor, precum și cheltuieli în timp pentru întreținere. În figura 13 este prezentată cu caracter informativ distribuția

intersectiilor dintre traseele rutiere si cele de cale ferata. [sursa: Plan de Mobilitate Urbana Durabila pentru Polii de Crestere din Romania – Raport Interimar 1 feb 2015]

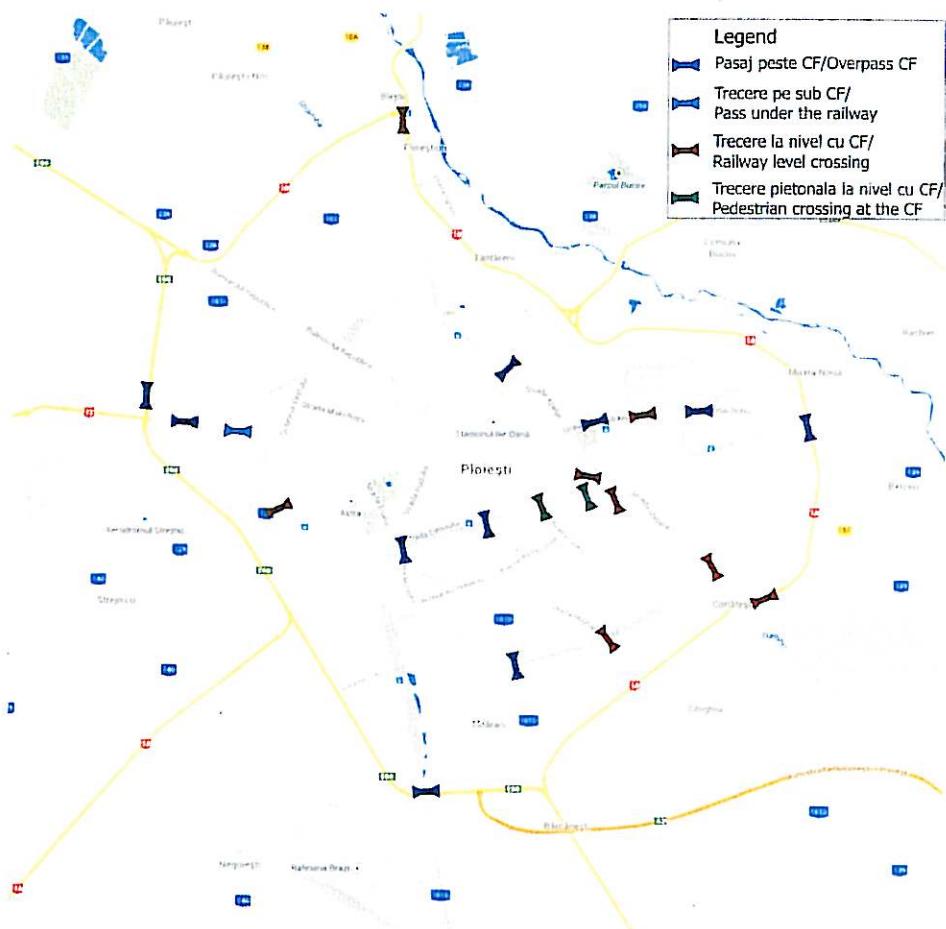

Fig. 13

Distributia intersectiilor dintre traseele rutiere si cele de cale ferata
[sursa: Plan de Mobilitate Urbana Durabila pentru Polii de Crestere din Romania – Raport Interimar 1 feb 2015]

Din punct de vedere a functionalitatii in teritoriu, municipiul reprezinta principalul nod de cale ferata din zona de dezvoltare Muntenia – sud. Nodul de cale ferata Ploiesti asigura interconectarea magistralelor C.F. in statiile "Ploesti – Sud", "Ploesti – Vest", "Ploesti – Nord". De asemenea in statia Ghighiu exista un triaj pentru vagoane. In afara statiilor mentionate mai sus, in zona de influenta a municipiului Ploiesti exista o serie de statii cf care conecteaza unitatile industriale: statia Est, statia Triaj, statia Crang si statia Dacia.

4.3. Transportul public

In municipiul Ploiesti transportul public de persoane este asigurat de catre S.C. Transport Calatorii Express S.A. Ploiesti. Aceasta a fost infiintata in anul 2012 pe baza Hotararii Consiliului Local nr. 220/2012, prin reorganizarea Regiei Autonome de Transport Public Ploiesti.

Transportul public este asigurat cu urmatoarele tipuri de mijloace de transport : autobuze, tamvaie, troileibuze. In tabelul 4 sunt prezentate traseele transportului public precum si rutele pe care acesta se desfasoara [sursa: www/ratp.ro].

Tabel 4

Tipul mijlocului de transport	Nr traseu	Ruta
Autobuz	1	METRO - CABLU- RAFINARIA ASTRA/COMAT
	2	GARA VEST -GARA DE SUD
	4	GARA NORD - GARA VEST
	4b	VEGA - HALE CATEDRALA
	5	SPITALUL JUDETEAN - MIHAI BRAVU
	7	DOROBANTUL - BARIERA RUDULUI
	8	HALE CATEDRALA - CIMITIR BOLVANI
	22/22b	POD INALT/AUCHAN - BARIERA UNIRII
	25rap	POD INALT - TORCATORI - GARA SUD
	28	SPITALUL JUDETEAN - UZTEL
	30	BLOC REPUBLICII - HIPODROM
	32/32b	HALE CATEDRALA - PROTAN
	35	LAMAITA - PALATUL CULTURII
	35b	BLOC 39 - PALATUL CULTURII
	36	POD INALT / BLOC 39 - UZTEL
	39/39b	POD INALT/HALE CATEDRALA - CARTIER PLOIESTI WEST
	40	HALE CATEDRALA - BEREASCA
	40b	HALE CATEDRALA - PARC C-TIN STERE
	42	POD INALT / COMAT
	44b	MALUL ROSU - UZTEL
	48	MALUL ROSU - COMAT
	52	DOMNISORI - GARA VEST/CANTACUZINO - UZTEL
	53	BLOC 39 - GARA DE SUD

Traseele mijloacelor de transport public asigura conexiuni intre toate cartierele municipiului Ploiesti si zona centrala. In figura 14 este prezentata harta traseelor pentru transport in comun in municipiul Ploiesti [sursa : www/ratp.ro].

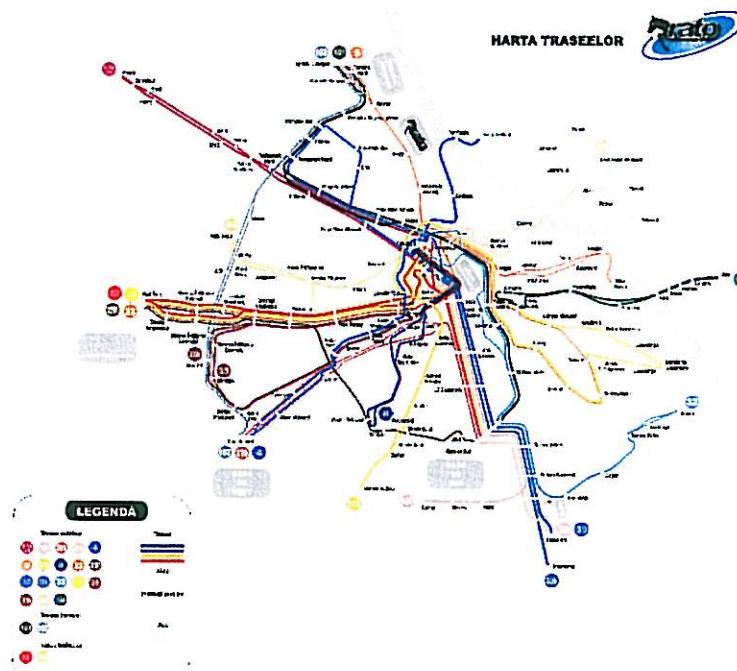

Fig. 14
Traseele pentru transport in comun in municipiul Ploiesti
[sursa : www/ratp.ro].

4.4. Transportul de marfuri

Referitor la transportul de marfuri trebuie mentionat faptul ca acesta se desfasoara in principal pe arterele de penetrare in oras, iar in zona centrala accesul vehiculelor de marfa este restrictionat din considerente ecologice si urbanistice. Politica de organizare a transportului de marfuri in interiorul orasului a fost reglementata de catre administratia locala prin *Planul Strategic de Logistica* adoptat in anul 2006. In figura 15 este prezentat planul zonelor urbane cu restrictii cu privire la transportul de marfa. [sursa: *Plan de Mobilitate Urbana Durabila pentru polii de crestere din Romania – Raport Interimar 1 feb 2015*]

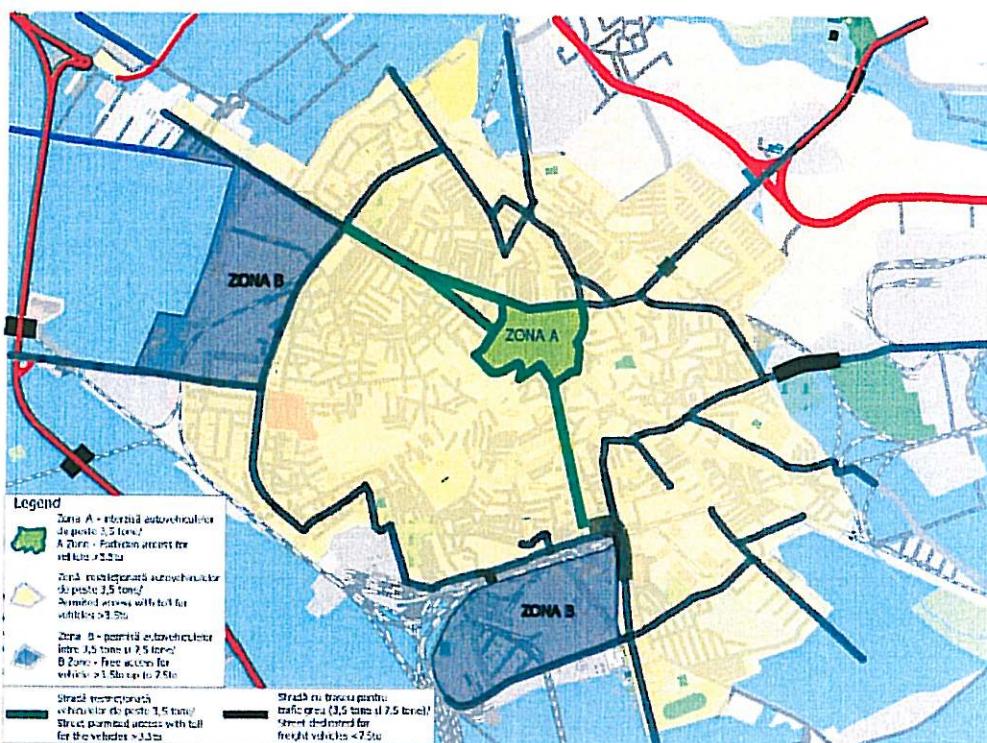

Fig. 15

Restrictii cu privire la transportul de marfa

[sursa: *Plan de Mobilitate Urbana Durabila pentru polii de crestere din Romania – Raport Interimar 1 feb 2015*]

4.5. Parcarile

In municipiul Ploiești parcarea si stationarea vehiculelor reprezinta una din principalele probleme ale retelei rutiere urbane. In raport cu numarul de vehicule existent in municipiul Ploiești (circa 100000 unitati), numarul spatiilor de parcare este total insuficient.

Daca consideram ca pentru un autoturism sunt necesari in medie circa 20mp (10mp la domiciliu si 10mp la destinatie), constatam ca la nivelul orasului sunt necesari circa: $20\text{mp}/\text{auto} \times 100000 \text{ auto} = 2000000 \text{ mp}$. Aceasta suprafata este echivalenta cu aproximativ *285km de drum cu doua benzi de circulatie*. Constatam ca aceasta suprafata necesara numai parcarii nu se regaseste dacat in foarte mica masura pe suprafata orasului. Trebuie subliniat faptul ca suprafetele destinate parcarii nu trebuie inscrise in suprafata de carosabilul destinata circulatiei. Avand in vedere faptul ca in municipiul Ploiesti reteaua rutiera cf. datelor prezентate de catre administratia locala, reprezinta circa 320km. Din analiza datelor prezентate mai sus, rezulta faptul ca in momentul actual in municipiul Ploiesti, daca se doreste asigurarea spatilor de parcare pentru toate autovehiculele, trebuie suplimentata substantial supratafa carosabila destinata parcarii.

Din analiza documentelor prezентate de catre beneficiar, (lista proiectelor realizate de catre primaria municipiului Ploiesti, Directia Tehnica de Investitii, in perioada 2010-2014), se remarcă faptul ca Primaria Municipiului Ploiesti in perioada mentionata, a realizat un numar de 16 proiecte care au cuprins intre altele extinderea numarului de locuri de parcare.

4.6. Circulatiile nepoluante: pietonii si biciclistii

In municipiul Ploiesti pentru circulatia pietonilor sunt asigurate spatii de deplasare amenajate corespunzator. Traversarile arterelor de circulatie sunt semnalizate si marcate corespunzator. In intersectiile semaforizate timpii de verde asigura traversarea pietonilor in conditii corespunzatoare. In zona centrala in vecinatatea Palatului Administrativ si a pietii de alimente a fost organizata o zona de circulatie pietonala semnalizata si mobilata corespunzator.

Referitor la circulatia biciclistilor remarcam o serie de initiative pentru realizarea unor piste destinate acestui mod de transport, in general pe Bd. Bucuresti si in zonele cu locuinte colective pe Bd. Republicii. Pistele pentru biciclisti in forma in

care se prezinta nu incurajeaza deplasarea si chiar pot genera evenimente rutiere, prin lipsa masurilor de siguranta rutiera.

5. Analiza desfasurarii traficului de vehicule prin modelare numérica

5.1. Consideratii asupra conceptului de modelare a traficului de vehicule

Studiile de trafic analizeaza deplasarea vehiculelor pe retele rutiere sub forma fluxurilor de trafic. Din acest punct de vedere se constata ca traficul rutier se poate desfasura in "*flux continuu*" (fara opriri sau intarzieri) sau sub forma de "*flux intrerupt*". In practica, prima categorie de trafic corespunde deplasarilor in afara localitatilor, pe drumuri sau autostrazi. Categoria a doua (flux intrerupt) reprezinta situatia desfasurarii traficului in mediul urban. In concordanta cu cele aratare mai sus, rezulta ca traficul urban in cea mai mare parte, este caracterizat prin modele matematice care se inscriu in teoria de calcul a fluxului intrerupt. Fragmentarea deplasarilor de vehicule pe artere rutiere urbane este determinata de prezenta intersectiilor si de prezenta trecerilor de pietoni. In acest mod se poate intelege ca deplasarea vehiculelor prin intersectii determina o limitare a timpului in care un flux de circulatie poate traversa intersectia in decursul unitatii de timp (ora).

Avand in vedere aceste consideratii cu caracter teoretic general, in cadrul prezentului studiu de trafic au fost analizate cu prioritate conditiile de desfasurare a traficului de vehicule in intersectiile retelei rutiere din zona analizata. Desfasurarea deplasarilor de vehicule intre intersectii a fost analizata sub aspectul identificarii posibilelor obstacole care jeneaza desfasurarea traficului, influentand prin obstructionare sau prin limitarea sectiunii transversale a partii carosabile.

In cadrul analizei globale asupra desfasurarii traficului rutier in zona, au fost evaluate toate arterele care asigura deplasari ale vehiculelor, precum si intersectiile aferente.

5.2. Utilizarea tehnicii informationale in studiile de trafic

Realizarea unui transport eficient necesita in permanenta o atenta analiza si o evaluare asupra modului in care se desfasoara deplasările.

Se constată ca pentru stabilirea unei soluții de transport corecte și rationale, procesul de decizie trebuie să se bazeze în politica de transport, pe analize și optimizări ale variantelor posibile. În aceste condiții, adoptarea soluției pentru organizarea transporturilor poate fi privită ca o decizie managerială cu contribuții multidisciplinare din partea specialistilor (ingineri, urbanisti, economisti, specialisti de mediu, informaticieni, sociologi, etc.).

Utilizarea tehnicii informationale, a programelor specializate pentru domeniul ingineriei de trafic, reprezintă un domeniu de activitate cu multiple avantaje pe planul analizei și optimizării soluțiilor de transport. În acest sens, semnalăm posibilitatea de a realiza analize ale modului în care se desfasoară traficul rutier folosind *conceptul de modelarea numerică*. Aceasta abordare oferă specialistilor posibilitatea modelării pe calculator a retelelor rutiere urbane (artere și intersecții) prin generarea elementelor geometrice și declararea în intersecții a valorilor de trafic pentru care se dorește studiul de trafic.

Alegerea programelor de calcul necesită pe de o parte, cunoasterea cerintelor beneficiarului (condiții de tema, restricții ale normelor tehnice), iar pe de alta parte, evaluarea în detaliu a performanțelor programelor de calcul care se vor folosi ca instrumente de lucru. Programele de calcul care sunt folosite în domeniul studiilor de trafic, oferă posibilitatea realizării de analize dinamice, în timp real, asupra variantelor propuse pentru analiza. În aceste condiții, remarcăm faptul că specialistul are la indemana un instrument de analiza, atât sub aspectul realizării de modele de trafic, cât și sub aspectul optimizării soluțiilor pentru circulația pe retele rutiere urbane.

5.2.1. Programul de modelare folosit si algoritmi de calcul ai modelului de calcul “Synchro”

Pe piata I.T. destinata ingineriei de trafic, produsul IT “Synchro” reprezinta o solutie integrata pusa la dispozitia specialistilor din domeniul ingineriei de trafic.

Programul de calcul realizeaza modelarea retelelor rutiere urbane (artere si intersectii) prin generarea elementelor geometrice si declararea in intersectii a valorilor de trafic.

Analiza de trafic are la baza o teorie proprie de calcul a capacitatii de circulatie in intersectii I.C.U. (Intersection Capacity Utilisation), dezvoltata de specialistii de la compania “Trafficware Corporation” (Albany – California). In acelasi timp, in program, sunt utilizati si algoritmi de calcul dezvoltati de Manualul de Capacitate (H.C.M. 2000) al Administratiei Americane de Drumuri (A.A.S.H.T.O.). Referitor la coordonarea si optimizarea circulatiei, programul Synchro permite realizarea in timp real a unor scenarii pentru planificarea intersectiilor. Functiile de optimizare se realizeaza pe baza algoritmului de reducere a intarzierilor si evitarea blocajelor.

Functiile de optimizare abordeaza mai multe nivele de lucrari:

- Optimizarea lungimii ciclului de semaforizare si a fazelor in fiecare intersectie izolata. Pe baza acestui nivel de optimizare se poate realiza o partitie a retelei in mai multe subsisteme.
- Optimizarea lungimii ciclurilor de semaforizare in toate intersectiile de pe arera analizata.
- Optimizarea decalajelor intre faze in cadrul ciclurilor de semaforizare la intersectiile de pe arera analizata.
- In cazul retelelor rutiere urbane, cu ajutorul programului se poate realiza o analiza a diagramei timp–spatiu, care ofera posibilitatea stabilirii solutiilor optime pentru circulatia vehiculelor in sistemul coordonat de semaforizare. Marimea ferestrei de verde pentru arera analizata poate fi stabilita in variante multiple: artere de transport, artere comerciale, sensuri preferentiale cu prioritati diferite.

Analiza rezultatelor obtinute prin modelarea circulatiei se face cu ajutorul programelor de simulare si vizualizare "SimTraffic" sau "CORSIM". De asemenea, rezultatele pot fi exportate pentru programul "H.C.S." (Highways Capacity Software).

Utilizarea programului "SimTraffic" permite vizualizarea, pe modelul digital al intersectiei, circulatia vehiculelor in sistem animat, precum si scheme ale intersectiilor, in care sunt evidențiate rezultatele procesului de simulare.

In acest sens se pot analiza urmatoarele categorii de informatii:

- ▶ intarzierea vehiculelor la accesul in intersectie (sec);
- ▶ timpul de stationare a vehiculelor la intrarea in intersectie (sec/veh);
- ▶ viteza medie de circulatie prin intersectie (km/h);
- ▶ consumul de carburant (km/l);
- ▶ numarul de vehicule care nu pot intra in intersectie pe faze de verde;
- ▶ lungimea coloanei de vehicule care se acumuleaza la accese in intersectie.

5.2.2. Parametrii de analiza folositi de modelul de calcul "Synchro".

In vedera modelarii cat mai fidele a desfasurarii traficului de vehicule au fost retinuti pentru analiza comparativa intre modelele realizate urmatorii parametri:

Nivelul de servicii al intersectiei.

Nivelul de serviciu pentru intersectiile se exprima ca o masura a discomfortului, frustrarii soferului, consumului de carburant si timpului crescut de calatorire. Intarzierea unui conducator auto este compusa dintr-un numar de factori legati de semaforizarea intersectiilor, traficul de vehicule, obstacole sau incidente. Intarzierea totala este data de diferența dintre timpul total de calatorie si timpul de referinta al calatoriei. Aceasta rezulta in conditii ideale de circulatie: absenta semaforului electric in intersectie, absenta altor vehicule in intersectie.

Nivelul de servicii reprezinta masuri / limite rezonabile in aprecierea calitatii calatoriei in intersectii (intarzierea controlata):

Nivelul A (LOS A) descrie un nivel scazut al intarzierilor calculate, (maxim 10s/veh). Acest nivel de servici este adoptat in caracterizarea circulatiei intr-o intersectie atunci cand deplasarea vehiculelor se face fara intarzieri si majoritatea vehiculelor care sosesc pot traversa intersectia. Majoritatea vehicule nu opresc deloc. Lungimi scurte ale ciclului de semaforizare pot contribui la valori scazute ale intarzierilor.

Nivelul B (LOS B) exprima faptul ca intersectia functioneaza cu intarzieri minore. Deplasarea vehiculelor in intersectie se face fara intarzieri apreciabile. Valoarea estimata a intarzierilor se plaseaza intre 10 s/veh si 20 s/veh.

Nivelul C (LOS C) descrie deplasari ale vehiculelor in intersectie cu intarzierea limitata, cuprinse in marja de 20 s/veh pana la 35 s/veh. Aceste intarzieri pot rezulta din deplasarea vehiculelor cu o viteza moderata. In aceste conditii poate sa apară fenomenul de supraincarcare a benzilor de circulatie. Numarul vehiculelor ce opresc la intersectie in cadrul unei functionari de nivel "C" sa fie insemnat, desi multe vehicule pot trece fara sa opreasca.

Nivelul D (LOS D) descrie deplasari ale vehiculelor in intersectie cu intarziere controlata mai mare de 35 s/veh pana la limita a 55 s/veh. In cadrul acestui nivel de servici, influenta congestiei in trafic devine usor de remarcat. Intarzierile mai lungi pot rezulta din deplasari ingreunate ale vehiculelor si valori ale indicatorului volum/capacitate (v/c) ridicate.

Nivelul E (LOS E) descrie conditii de circulatie ale vehiculelor in intersectie cu o intarziere controlata cuprinsa in marja 55s/veh - 80s/veh. Valorile ridicate ale intarzierilor indica viteza de deplasare redusa in intersectie si rate ridicate ale indicatorului volum/capacitate (v/c). Numarul ciclurilor de semaforizare care nu pot asigura trecerea tuturor vehiculelor (acumulate in sirul de asteptare) pe faza de verde, este ridicat.

Nivelul F (LOS F) indica un nivel al intarzierilor mai mari de 80 s/veh. Acest nivel, considerat inacceptabil de catre majoritatea

soferilor, apare adesea in situatia blocarilor in trafic. Din punct de vedere al debitelor care determina acest nivel ridicat al intarzierilor se poate remarcă faptul ca aceasta situatie are loc atunci cand rata fluxului de sosire depaseste capacitatea grupurilor de benzi de circulatie. In cadrul acestui nivel de servici viteza de deplasare a vehiculelor este redusa si adesea se observa opriri in flux.

Nivelul G (LOS G), $1.00 < ICU = 1.09$: Intersectia este cu 10% - 20% peste capacitatea sa si este probabil sa se inregistreze congestionari de 60 to 120 min pe zi. Cozile de asteptare sunt lungi si pot apare blocaje frecvente.

Nivelul H (LOS H), $1.09 < ICU$: Intersectia este cu 20% peste capacitatea de circulatie si pot aparea congestii de peste 120 min pe zi. Cozile de asteptare sunt lungi si pot apare blocaje frecvente.

Capacitatea de circulatie a intersectiei

Capacitatea de circulatie a intersectiei este masurata prin intermediul coeficientului de utilizare a capacitatii de circulatie a intersectiei (I.C.U.). Coeficientul se calculeaza pe baza raportului dintre suma timpului total necesar pentru a se asigura relatiile de miscare in intersectie a tuturor participantilor la trafic, raportat la lungimea ciclului de semaforizare calculat.

Coeficientul I.C.U. indica rezerva de capacitate disponibila a intersectiei sau cu cat s-a depasit aceasta rezerva. Coeficientul nu poate estima intarzierile, dar poate fi folosit pentru a indica cand o intersectie va fi congestionata. Coeficientul I.C.U. poate fi de asemenea folosit pentru o intersectie nesemnalizata pentru a determina capacitatea de circulatie.

Lungime estimata a sirurilor de asteptare

Acest parametru exprima calitatea traficului de vehicule la traversarea unei intersectii. Calculul sirurilor de asteptare se face in conformitate cu Manualul de Capacitate (H.C.M.) realizat de catre administratia americana de drumuri (A.A.S.H.T.O.). Valorile estimate ale sirurilor de asteptare se calculeaza pt.

fiecare banda de circulatie si in concordanta cu dorinta de miscare in intersectie a participantilor la trafic. Pentru intersectiile nesemaforizate calculul teoretic al sirurilor de asteptare este prezentat in H.C.M. capitolul 17, (pag. 17-21). Lungimea medie a sirurilor de asteptare este rezultatul produsului dintre intarzierea calculata pentru fiecare relatie de miscare in intersectie si debitul orar pe banda de circulatie considerata.

$$L_{\text{sir}} = (d_i \times Q_i)/3600 \text{ [veh]}$$

unde: d_i - intarzierea calculata pe banda "i"

Q_i = debitul orar pe banda de circulatie

5.3. Modelul desfasurarii traficului de vehicule

5.3.1. Masuratori de debite de trafic

In vederea intocmirii studiului de trafic in cadrul prezentei lucrari, s-a realizat un program de investigatii asupra deplasarilor vehiculelor in intersectiile de pe reteaua majora de transport.

Programul de masuratori s-a realizat pe baza planului de situatie al municipiului Ploiesti. In vederea modelarii retelei rutiere s-au intocmit relevantele alcatuirii geometrice a tuturor intersectiilor analizate. Cu aceasta ocazie au fost codificate intersectiile. In plana 7 este prezentat planul de situatie al Municipiului Ploiesti si codificarea intersectiilor investigate.

Investigatiile de trafic realizate sunt de tipul "sondaje de trafic". Ele au urmarit inregistrarea debitelor de trafic pe categorii de vehicule. Inregistrările realizate au fost programate pentru o esantionare reprezentativa a traficului de vehicule atat in zilele de lucru cat si in zilele de la sfarsitul de saptamana. Intervalele de masuratori au fost alese de asa natura incat valorile masurate sa poata fi reprezentative pentru desfasurarea traficului.

Avand in vedere distributia zilnica a traficului rutier, s-a convenit ca inregistrările de debite, sa se realizeze in perioadele orelor cu valori importante ale deplasarilor. Valorile pentru debitele de trafic s-au inregistrat pe categorii

distincte de vehicule: motociclete, autoturisme, autoutilitare, autocamioane peste 7.5t, autobuze, etc. Masuratorile inregistrate in cadrul sondajelor de trafic sunt prezentate in anexa 1.

Prelucrarea datelor inregistrate s-a facut prin transformarea traficului recenzat pe categorii de vehicule, in trafic exprimat in vehicule etalon turisme (v.e.t.). La transformare s-au utilizat coeficientii de echivalare stabiliți de normele în vigoare.

Pe baza masuratorilor inregistrate s-a intocmit planul curentilor de trafic pentru fiecare intersecție analizată.

In figurile urmatoare (fig.16 – fig.54) sunt prezentate in detaliu valorile debitelor de calcul exprimate in vehicule etalon turisme corespunzatoare fiecarei intersectii de pe reteaua rutiera majora analizata.

5.3.3. Model numeric pentru circulatia rutiera

Etape de studiu

In cadrul prezentei lucrari au fost realizate urmatoarele etape:

- Evaluarea tramei stradale a municipiului si identificarea arterelor majore de transport rutier care vor fi introduse in modelul de trafic.
- Relevul retelei rutiere – artere, intersectii.
- Investigatii asupra desfasurarii traficului de vehicule in intersectii (masuratori de debite de trafic pe categorii de vehicule).
- Construirea modelului de trafic al circuletiei existente.
- Calibrarea modelului de trafic realizat prin compararea rezultatelor obtinute din simularea numérica cu valorile similare identificate pe teren.
- Formularea unor observatii care sa evidenteze deficiente ale desfasurarii traficului in municipiul Ploiesti.

La realizarea modelului numeric au fost introduse ca date de calcul particularitatile fiecarei intersectie din aria urbana analizata:

- alcatuirea si functionarea intersectiei;
- elementele geometrice ale fiecarui acces al intersectiei;
- semaforizarea daca exista;
- semnalizarea rutiera verticala;
- latimile identificate pe teren pentru fiecare strada;
- prezenta trecerilor de pietoni in intersectii;
- parcajele la bordura ale autovehiculelor;
- prezenta pistelor pentru biciclisti;
- existenta sensurilor unice pe artere.

5.3.4. Rezultate obtinute din simularea numérica

Modelarea desfasurarii traficului de vehicule, precum si evaluarea rezultatelor obtinute se realizeaza prin analiza pe doua palieri:

- analiza parametrilor care caracterizeaza modelul de trafic. Acest set de informatii sunt furnizate de catre programul de modelare Synchro.

- analiza rezultatelor obtinute in urma simularii numerice a desfasurarii deplasarilor realizata cu ajutorul aplicatiei SimmTraffic.

Principalii parametrii de analiza a calitatii desfasutarii traficului utilizati in evaluarea traficului sunt:

- Indicele de utilizare a capacitatii (I.C.U.)
- Nivelul de Servicii (L.O.S.) in intersectiile semaforizate.
- Intarzieri medii in intersectii.
- Viteza medie de deplasare a vehiculelor
- Lungimea medie a sirurilor de asteptare la intrarea in intersectii.

In plansele anexate prezentului raport se pot identifica valorile parametilor astfel:

- Plansa 8 – indicii de utilizare a capacitatii in fiecare intersectie cuprinsa in analiza.
- Plansa 9 - intarzieri medii calculate pe accese in intersectii.
- Plansa 10 – viteze medii estimate pe accese.

Valorile detaliate pentru toti parametrii rezultati din modelarea circulatiei si din simularea numrica sunt evidenitati astfel:

- in anexa 2 - *parametrii care caracterizeaza modelul de trafic.*
- in anexa 3 - *rezultatele obtinute in urma simularii numerice.*

6. Concluzii rezultate din studii si analize

- In raport cu dimensiunile orasului, cu conditiile socio-economice aferente care determina nivelul cererii de mobilitate, se poate considera ca in municipiul Ploiesti, la nivelul anului 2015, transportul rutier se desfasoara in parametrii corespunzatori fara importante rezerve de capacitate de circulatie.
- In perioada 2010-2014 administratia locala a depus eforturi importante pentru modernizarea si extinderea infrastructurii rutiere

urbane. In acest sens se evidențiază un număr de 151 de proiecte de infrastructură și are în desfășurare alte 15 proiecte aflate în diferite stadii de desfășurare (vezi tabel 4). În urma acestor proiecte au fost modernizate un număr apreciabil de străzi, a fost modernizată infrastructura de transport pe sine, s-a imbunătățit transportul public cu autobuzele, au apărut primele initiative pentru introducerea sistemelor moderne de management al traficului.

- Accesibilitatea traficului rutier către municipiul Ploiești s-a imbunătățit substanțial prin definitivarea unor proiecte majore de transport realizate de către Ministerul Transporturilor și Consiliul Județean Prahova:
 - › Modernizarea centurii de vest și implicit sporirea capacitatii de circulație a acesteia.
 - › Deschiderea circulației rutiere pe tronsonul autostrazii A3 (București – Ploiești).
 - › Realizarea pasajului denivelat peste DN1 care asigură legătura DJ236 și mai departe accesul în zona de nord a municipiului Ploiești.
 - › Modernizarea unor drumuri județene care acced în municipiul Ploiești.
- Tendința de dezvoltare economică a orașului determină în continuare sporirea cererii de transport. Această situație se identifică în zona de nord unde au fost realizate o serie de dezvoltări imobiliare: centre comerciale și cartiere de locuințe.

7. Disfuncționalități înregistrate în transportul rutier

7.1. Deficiențe identificate din analiza modelării numerice a traficului rutier.

Modelarea desfasurării traficului rutier cu ajutorul "modelelor de trafic" indică o serie de zone urbane cu deficiențe în desfasurarea deplasărilor:

- *Capacitate de circulație* în intersecții exprimată prin "indicele de utilizare a capacitatii" indică un număr apreciabil de intersecții care

sunt aproape de capacitatea maxima. Din analiza acestui indicator se poate estima rezerva de capacitate de circulatie pe care o ofera intersectiile analizate. In acest sens remarcam ca intersectiile cu probleme, sub aspectul capacitatii de circulatie se gasesc de regula pe arterele de categoria a-II-a si a-III-a. Din analiza plansei nr.8 a prezentului studiu, care evidențiaza indicii de utilizare a capacitatii, putem identifica doua zone distincte ale orasului amplasate aproximativ in arealul central, in care in intersectii exista o rezerva de capacitate redusa care poate genera blocaje.

Zonele deficitare pot fi evidențiate astfel:

grup 1 – Str. Gh. Doja, Postei, Nic. Balcescu, Tache Ionescu, Bd. Republicii.

grup 2 – str Rudului, I.L.Caragiale, Grigore Cantacuzino, Sos. Vestului.

- *Nivelul de servicii al intersectiilor.* Acest parametru folosit in ingineria de trafic exprima calitatea deplasarilor vehiculelor in intersectii sub aspectul timpilor pierduti la traversare. Intarzierile in intersectii determina viteze reduse de deplasare pe arterele care converg in intersectie si de asemenea se creeaza sansa de a se forma siruri de asteptare pe accese.

Rezultatele obtinute din modelarea numerica indica o serie de intersectii in care circulatia se desfasoara cu dificultati. Deficientele identificate sunt evidențiate in tabelul 5. Din analiza datelor centralizate rezulta ca nivelul de interventie pentru imbunatatirea conditiilor de circulatie in intersectii se structureaza pe doua paliere de urgență: Interventii pe termen scurt pentru intersectiile cu capacitate de circulatie depasita, si interventii pe termen mediu pentru intersectiile cu rezerva de capacitate de circulatie redusa.

7.2. Problematica parcarii

- Parcarea autovehiculelor este deficitara in multe zone ale orasului
- In zona centrala exista o grava lipsa de spatii de parcare pentru autoturisme atat pentru riverani cat si pentru vizitatori.
- In zonele cu locuinte colective nu exista o viziune unitara asupra parcarii de rezedinta.
- Din materialele studiate nu a fost identificata o reglementare legata de spatii de parcare, care sa fie aplicata in cadrul proiectelor de construcii noi.
- Nu exista un management al parcarilor si o viziune de dezvoltare a serviciilor de parcare pentru cetateni la nivelul municipiului. In momentul actual exista doar reglementari ale administratiei locale doar pentru taxarea autoturismelor in zona centrala. Sistemul de taxare este greoi si rudimentar.
- Pe strazile din zona veche a orasului cu artere care au 2 benzi in sectiune transversala, parcare vehiculelor la bordura sau pe trotuare, impiedica desfasurarea circulatiei rutiere si pietonale.

7.3. Semaforizarea

Semaforizarea intersecțiilor nu este coordonata în sistem de “*unda verde*” care să asigure o deplasare fluenta a participantilor la trafic cu pierderi minime de timp.

7.4. Transportul public

- Transportul public este adesea întârziat în trafic datorită faptului că nu există benzi specializate pentru aceasta categorie de vehicule.
- Nu există suficiente amenajări ale stațiilor pentru transport public în “alveola” în afara partii carosabile.

7.5. Conceptul park and ride și transportul multimodal

- Nu este dezvoltat conceptul “*park and ride*” la accesele în municipiu Ploiești.

- Nu exista abordari in nici un proiect pentru implementarea conceptului urban de « *transport multimodal* ». Amenajarile existente nu incurajeaza pasagerii de a folosi mai multe moduri de transport. Aceasta situatie este se intalneste cu precadere in toate statiile cf.

7.6. Transportul cu bicileta

Transportul cu bicileta nu este incurajat. Pistele dedicate pentru biciclisti nu au amenajari corecte si nu au continuitate. Din materialele studiate nu s-a identificat nici un proiect care sa solutioneze transportul cu bicileta la nivelul orasului sau macar pe cartiere.

7.8. Siguranta rutiera

Din materialele existente puse la dispozitie de catre beneficiar, nu au fost identificate preocupari ale administratiei pentru siguranta rutiera pe arterele orasului.

7.9. O serie de proiecte propuse prin documentele urbanistice anterioare nu au fost indeplinite – vezi tabel 4 al prezentului raport.

Intocmit
dr.ing. **Valentin ANTON**

Intersection Summary

Area Type: Other

Cycle Length: 90

Actuated Cycle Length: 90

Offset: 0 (0%), Referenced to phase 2:NWTL and 6:SET, Start of Green

Natural Cycle: 90

Control Type: Pretimed

Maximum v/c Ratio: 1.08

Intersection Signal Delay: 28.7

Intersection LOS: C

Intersection Capacity Utilization 69.5%

ICU Level of Service C

Analysis Period (min) 15

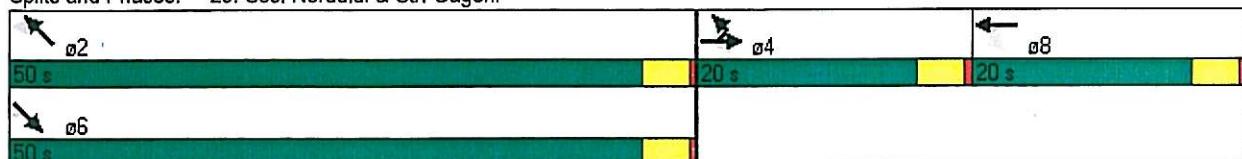

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 25: Sos. Nordului & Str. Gagenei

Intersection Capacity Utilization 100.6%

ICU Level of Service G

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

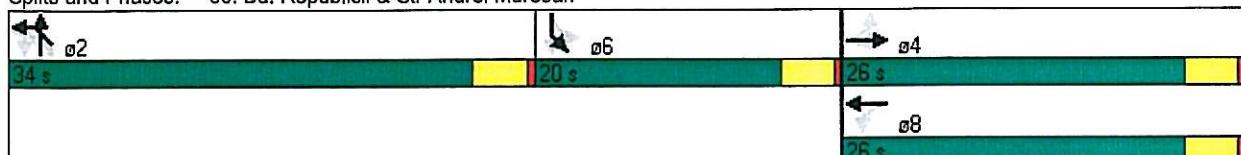

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

dl Defacto Left Lane. Recode with 1 though lane as a left lane.

! Phase conflict between lane groups.

Intersection Summary

Area Type: Other

Cycle Length: 80

Actuated Cycle Length: 80

Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Green

Natural Cycle: 80

Control Type: Pretimed

Maximum v/c Ratio: 0.87

Intersection Signal Delay: 26.3

Intersection LOS: C

Intersection Capacity Utilization 63.5%

ICU Level of Service B

Analysis Period (min) 15

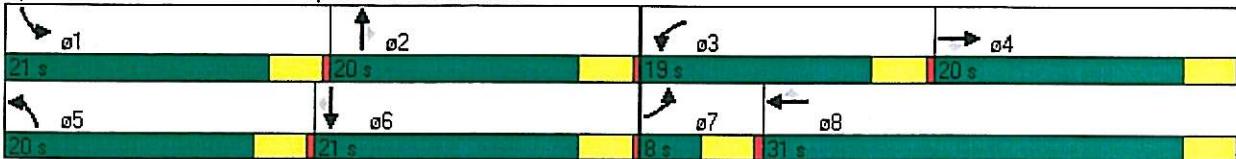

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

dl Defacto Left Lane. Recode with 1 though lane as a left lane.

Splits and Phases: 104: Bd. Republicii & Sos Nordului
